FEBRUARY 2021

EXECUTIVE SUMMARY

There is a great probability for the development of tourism industry if we are capable of ensuring infrastructural development, development of transportation and communication system and safety tourist spot for the tourists. There is a huge tourist attraction opportunity in the south-eastern part, which is the Chittagong Division, there are natural and hilly areas like Chittagong Hill Tracts, along with sandy sea beaches. The Government of Bangladesh has embarked on the program to develop new Economic Zones in the country, with the objective of inclusive economic growth and job creation through developments of industries. One of the main attractions of Teknaf will be the Naf Tourism Park. The Naf Tourism Park is a proposed tourist spot in the Jaliardwip, Cox's Bazar, and will be the first exclusive tourism park in Bangladesh.

BEZA is developing this as part of its plan to develop 100 special economic zones throughout the country. BEZA is responsible to execute this project "Construction of Cable Car at Naf Tourism Park". At present, the route is Ne-Taung Hill to Naf Tourism Park (9.5km), after the construction of the Cable Car tourist attraction will increase in this area. As a result, this project will have a positive impact on overall economic development and at the same time, it will play an important role in promoting national tourism and improving the living standard of the locals. Teknaf is an upazila of Cox's Bazar district under Chittagong division. Naf Tourism Park will be located in the Jaliardwip Island which is situated in the middle of the Naf River that divides Myanmar and Bangladesh. The island is diverse and multifaceted as it has both hill and river view. It is the southern-most point in Bangladesh and it shares the border with Myanmar. The island is diverse and multifaceted as it has both hill and river view. Recreation or tourist activities and infrastructure development both generate social impact on the adjoining locality that requires an assessment.

The likely positive impacts with the establishment of the Cable car include:

- Enhancement of the socio-economic conditions of the local residential settlements;
- It will provide impetus for economic development in the Teknaf area but also around the surroundings and would also generate employment opportunities. The employment opportunities will grow steadily resulting in more demand of skilled, educated and unskilled people thereby increasing the standard of education in Bangladesh.
- It will help in the development of the tourism sector in Bangladesh and financial capital increase in contribution to the overall growth of the GDP in the country.
- The cumulative positive impacts of the project will result in increased mobility, employment generation, and above all better economic integration of the area with the major market and trade centre within project surrounding areas.
- Alleviate the primary education enrolments of women and also the children to cater the requirement to work in the tourism sector and interact with the tourists.

ONUSHANDHANI CREEDS LIMITED has carried out an SIA study for "Construction of Cable Car at Naf Tourism Park" project. Social impacts have been identified, and assessed, based on the baseline study undertaken as a part of SIA. The major impact identified is the change in culture and security of locality. But the people within the project site will be economically benefited as it will be a tourist attraction. The local people will get employment opportunity and the transportation facility of the locality will increase. The purpose of this report is to investigate and provide a social baseline, it can strongly be concluded that these projects will contribute significantly to attract the tourists, and eventually, overall economic development process will accelerated.

1.INTRODUCTION

1.1 Project Background

The Government of Bangladesh has embarked on a program to develop new economic zones in the country, with the objective of inclusive economic growth and job creation through development of industries. The economic zone is proposed to be located in the Sabrang Mouza of Upazila Teknaf at Cox's Bazar district of Bangladesh, approximately 90km from Cox's Bazar. The total land area demarcated for the proposed economic zone is 967 acres, which includes Khas Land (878.26 acres), canals and ponds (57.62 acres) and land under Bangladesh Water Development Board (31.18 acres). The project site is located at approximately 8 kms from the center of Teknaf Upazila. The proposed zone will be connected with the Marine Drive at the northern periphery, which will be used for access to the economic zone. The Marine Drive is under construction. Highway Teknaf-Shahparirdwip Road (Z1099) runs parallel to the site at a distance of 5km. It connects the National Highway (N1). The site is about 210km from Chittagong Railway Station and around 96km from Cox's Bazar Domestic Airport.

The proposed construction enables dividends on multiple fronts including but not exclusively limited to: tourism, employment openings, public transport system, enabling ease of access in mixed traffic setting, local level environmental study to be used for future references etc. The proposed project has scope for major impact on the mass movement in mixed traffic setting of the Teknaf-Shahparirdwip Highway (Z1099) and the presently under construction Mirsharai-Teknaf Marine Drive. However, the primary beneficiary of the project are the future tourists of both tourism parks. With provisions for special considerations for the newly-weds and the family-on-board tourists, the cable car provides potential financial growth with its sightseeing and easy-to-commute facilities for the inter-facility movement. The proposed site area does not have any railway connectivity. The nearest existing railway station is Chittagong Railway Station which is 50km from the site. The proposal has already received approval from the Railway Ministry. The proposed Sabrang EZ is located about 96 km from the Cox's Bazar domestic airport. It takes around 2.5 hours travel time via road to reach Cox's Bazar airport.

The proposed EZ will be connected with the Marine Drive at the northern periphery, which will be used for access to the EZ. The Marine drive is under construction. Highway Teknaf-Shahparirdwip Road (Z1099) runs parallel to the site at a distance of 5 kilometers. The highway connects the National Highway N1. The site is abutted by Bay of Bengal on the southern side and Western side, private owned land on its north and Khas land on its east. Project area is bounded by Naf River on the eastern extremity and the Bay of Bengal in the western proximity. The Naf River is an international river marking the border of southeastern Bangladesh and western Myanmar. The average depth is 128 feet (39 m), and maximum depth is 400 feet (120 m). It flows into the Bay of Bengal in the Indian Ocean, between the Bangladeshi Cox's Bazar District of the Chittagong Division, and the Burmese Rakhine State. The Bay of Bengal is the largest water region called a bay in the world. A number of rivers carry freshwater onto the Bay of Bengal including the Naf.

Onushandhani Creeds Ltd. has been commissioned by CUET to undertake a Social Impact Assessment for the project. This report presents Social Impact Assessment (SIA) study focusing on social screening and scoping of the project, social baseline studies, assessment of Social impacts, delineation of management plans.

1.2 Project Objectives

The specific purpose of this SIA report is to provide social baseline assessment, assessment of impacts and delineation of Management Plan of the Project and to fulfill the lenders viz. International Finance Corporation (IFC), Netherlands Development Finance Company (Dutch-Nederlandse Financierings-Maatschappij voor Ontwikkelingslanden N.V.-FMO), Japan International Cooperation Agency (JICA) etc requirements.

1.3 Study Objectives

The specific purpose of this SIA report is to provide social baseline assessment, assessment of impacts and delineation of Management Plan of the Project.

The objectives of this SIA are to:

- Facilitate an understanding of the elements of the existing baseline conditions that are relevant to resources/receptors that could be significantly impacted by the project.
- Identify the aspects of the Project likely to result in significant impacts to resources/receptors;
- Document how stakeholders have been engaged during the SIA process, and how stakeholder feedback has been considered in the SIA;
- Predict and evaluate the significance of the impacts of the Project;
- Identify the (environmental, social and health) aspects of the Project that need to be managed, and recommend appropriate and justified mitigation and enhancement measures;
- Determine the significance of residual impacts, taking into account the implementation of mitigation measures; and
- Generate plans for the management and monitoring of impacts, including plans for ongoing stakeholder engagement.

1.4 Study Area

It will be located in the Jaliardwip Island which is situated in the middle of the Naf River that divides Myanmar and Bangladesh. The island is diverse and multifaceted as it has both hill and river view. Exact Project site boundary are not determined yet.

Figure 1.1 Study Area Map

1.5 Scope of Work

The detailed scope of the SIA study is as outlined below:

- Screening of the Project based on applicable reference framework based on reconnaissance survey and desk based review of Project documents;
- Scoping for the SIA study;
- Development of an integrated project description of the Project components including its sub-components, which are under the purview of the Project Proponent (PP);
- Development of a regulatory, policy and administrative framework relevant to the Project;
- Monitoring, analysis and reporting of the environmental and social baseline data of the study area including consultation with local communities and other stakeholders;
- Assessment of the environmental impacts of the Project in the study area;
- Assessment of social impacts on the local community as well as Project affected people and any other stakeholders, which have been identified during the social consultation process;
- Formulation of an Environment and Social Management Plan and associated/specific mitigation plans for identified impacts; and

1.6 Limitations

This report is based on the information available as of 9th September 2020.

1.7 SIA Study Team

Onushandhani Creeds Ltd. constituted a team comprising of various experts to carry out the SIA study, as detailed out in the Table 1.3. The team was supported by DUET (Dhaka University of Engineering Technology) Team, Bangladesh for baseline data collection, TIA, social survey and consultations.

Table 1.1: List of Key Professional Experts and Responsibilities for Social Impact Assessment

	PROFESSIONAL STAFF			
Name of Staff	Firm/Organis ation	Area of Expertise	Position Assigned	Task Assigned
Dr. Mohammed Nurul Islam, P. Engr.	O.CREEDS LIMITED	EIA and SIA guideline development, Climate data analysis and trend analysis for climate variability.	Team Leader	The Team Leader will be responsible for team building and preparation of guidelines and study tools, overall supervision and communication functions in relation to feasibility study, liaison with CUET. He will also be responsible for river morphology assessment, river basin study, EIA and SIA guideline development, Climate data analysis and trend analysis for climate variability.

DR. TAREK	O.CREEDS LIMITED	Environmental Activities and Water Quality	Environmental Expert	EIA and SIA guideline line development, NRM, agriculture, disaster risk reduction, developing guiding principles related to the parameters, input support in guideline and study tools development, information collection through FGD & KII, data analysis and report preparation.
Dr. Zakir	O.CREEDS LIMITED	Surface Water & River Morphological expert	Hydrologist	Environmental perspective, developing guiding principles related to rivers course movement, input support in guideline and study tools development, information collection through FGD & KII, data analysis and report preparation
Dr. Ahsanul Kabir	O.CREEDS LIMITED	Transport Modeling and vehicle movement planning	Transport Modeling Expert	He will assess the existing and future road conditions, in particular at the tourism Street intersection that provides access to the tourism park beside Naf river. Also he will evaluate the potential impacts to the intersection, associated with the Project's construction and full capacity operation and consider of measures to mitigate traffic impacts.
Abdur Rahaman	O.CREEDS LIMITED	Climate Change Environment FGD	Disaster & Climate Change Specialist	EIA and SIA guideline line development, NRM, agriculture, disaster risk reduction, developing guiding principles related to the parameters, input support in guideline and study tools development, information collection through FGD & KII, data analysis and report preparation.
Shahadat Hossain	O.CREEDS LIMITED	Master Planning	Environmental & Water Specialist	Hydrological input support in guideline and study tools development.
Zahir Uddin Ahmed	O.CREEDS LIMITED	Financial Analysis	Financial & Transport Economist	Worked mainly for traffic Survey and cost- benefit analysis for proposed cable car. Will supervise the work of traffic survey farm and examined all the possible alternative routes for diverting traffic when construction works will start. Helped in preparing Traffic survey report and financial analysis of this cable car.

Mamun Ur Rashid Abid Kamal	O.CREEDS LIMITED O.CREEDS LIMITED	Social Survey and research RAP & LAP	Social Expert	He will be responsible for all the procurement, including but not limited to lab equipment, logistics, transportation, field equipment, machinery, tools. He will be responsible for the overall land use and land cover
			RS & GIS Expert	studies including but not limited to preliminary research, literature review, satellite image processing, image analysis, map preparation, drainage map preparation, digital elevation map preparation, land use map preparation.
Prof. Dr. Asaduzzaman,	Dept. of CSE, CUET	Data Processing	Assistant Professor (CUET)	Data Processing
Prof. Dr. Sajal Chandra Banik,	Dept. of Mechanical Engineering, CUET	Stations Design	Assistant Professor (CUET)	Water, Soil, Air and Noise measurement
Prof. Dr. Asiful Hoque	Dept. of Civil Engineering, CUET	Environment	Assistant Professor (CUET)	EIA and SIA guideline line development
Dr. Farzana Rahman Zuthi	Dept. of Civil Engineering, CUET	Hydrology	Assistant Professor (CUET)	Hydrological input support in guideline and study tools development.
Prof. Dr. Swapan Kumar Palit	Dept. of Civil Engineering, CUET	Environment	Assistant Professor (CUET)	EIA and SIA guideline line development
Prof. Dr. Md. Moinul Islam	Dept. of Civil Engineering, CUET	Hydrology	Assistant Professor (CUET)	Hydrological`, input support in guideline and study tools development.
Prof. Dr. Aysha Akter,	Dept. of Civil Engineering, CUET	Environment	Assistant Professor (CUET)	EIA and SIA guideline line development
Prof. Dr. Md. Reaz Akter Mullick,	Dept. of Civil Engineering, CUET	Hydrology	Assistant Professor (CUET)	Hydrological input support in guideline and study tools development.
Md. Atiqur Rahman Mollick	O.CREEDS LIMITED	Climate Change Environment FGD	Survey Assistant	EIA and SIA guideline line development, NRM, agriculture, disaster risk reduction, developing guiding principles related to the parameters
Md. Nazimuzzaman	O.CREEDS LIMITED	Social Survey and research RAP & LAP	Survey Assistant	He will be responsible for all the procurement, including but not limited to lab equipment, logistics, transportation, field equipment, machinery, tools.

1.8 Report Layout

The SIA report has been structured based on the scope of work shared by CUET to meet the applicable reference framework. The layout of the Report has been divided into 8 sections as briefly described in Table 1.2.

No.	Chapter Title	Description
1	Introduction	This section includes Introduction & background of the project, Project Objectives Study area description, Scope of the SIA study Limitations SIA team Layout of the report
2	Administrative Framework	 This section discusses The national and local legal and institutional framework within which the social assessment is carried out. It also identifies project-relevant international social agreements to which the country is a party. It also covers the applicable reference framework being used for the SIA study in addition to the national regulatory requirements for project financing.
3	Social Screening and Scoping	 This section describes The proposed project screening Project scoping Impacts
4	Social Baseline Conditions	This section Example 2 Describes relevant Social conditions within the study area, and Relevant socioeconomic conditions within the study area.
5	Public Consultation	 This section Describes the process undertaken during project design and preparation for engaging stakeholders, including information disclosure and consultation with affected people and other stakeholders; Summarizes comments and concerns received from affected people and other stakeholders and how these comments have been addressed in project design and mitigation measures, with special attention paid to the needs and concerns of vulnerable groups; and Describes the planned information disclosure measures and the process for carrying out consultation with affected people and facilitating their participation during project implementation.
6	Impact Assessment and	This section Predicts and assesses the project's likely positive and negative direct and indirect impacts to physical, biological,

Table 1.2: Layout of the Report

No.	Chapter Title	Description
	Mitigation Measures	 socioeconomic (including occupational health and safety, community health and safety, vulnerable groups and gender issues, and impacts on livelihoods through environmental media, and physical cultural resources in the project's area of influence, in quantitative term s to the extent possible; Identifies mitigation measures and any residual negative impacts that cannot be mitigated; explores opportunities for enhancement; identifies and estimates the extent and quality of available data, key data gaps, and uncertainties associated with predictions and specifies topics that do not require further attention; and examines global, trans boundary, and cumulative impacts as appropriate.
7	Management Plan	 This section deals with The set of mitigation and management measures to be taken during project implementation to avoid, reduce, mitigate, or compensate for adverse social impacts; Describes the mitigation, monitoring, implementation arrangements and performance indicators for effective implementation of the management plan; and Framework management plans for construction phase of the project.
8	Conclusion	This section provides The conclusions drawn from the impact assessment; and Recommendations for management during the project lifecycle.

2. ADMINISTRATIVE FRAMEWORK

2.1 Environment and Social related Legislations in Bangladesh

The main Acts and Regulations guiding environmental and social protection and conservation in Bangladesh are outlined in the following subsections:

2.1.1 The Environment Conservation Act, 1995 (subsequent amendments in 2000 and 2002)

The provisions of the Act authorize the Director General of Department of Environment (DOE) to undertake any activity that is deemed fit and necessary to conserve and enhance the quality of environment and to control, prevent and mitigate pollution. The main highlights of the act are:

- Declaration of Ecologically Critical Areas;
- Obtaining Environmental Clearance Certificate;
- Regulation with respect to vehicles emitting smoke harmful for the environment;
- Regulation of development activities from environmental perspective;
- Promulgation of standards for quality of air, water, noise, and soils for different areas and for different purposes;
- Promulgation of acceptable limits for discharging and emitting waste; and
- Formulation of environmental guidelines relating to control and mitigation of environmental pollution, conservation and improvement of environment.

2.1.2 Environment Conservation Rules (ECR), 1997 (subsequent amendment in 2017)

The Environment Conservation Rules, 1997 are the first set of rules promulgated under the Environment Conservation Act, 1995. These Rules provide for, inter alia, the following:

- The National Environmental Quality Standards (EQS) for ambient air, surface water, groundwater, drinking water, industrial effluents, emissions, noise and vehicular exhaust;
- Categorization of industries, development projects and other activities on the basis of actual (for existing industries/development projects/activities) and anticipated (for proposed industries/development projects/activities) pollution load;
- Procedure for obtaining environmental clearance;
- Requirements for undertaking IEE and EIA's as well as formulating EMP's according to categories of industries/development projects/activities; and
- Procedure for damage-claim by persons affected or likely to be affected due to polluting activities or activities causing hindrance to normal civic life.

Depending upon the location, size and severity of pollution loads, projects/activities have been classified in ECR, 1997 into four categories: *Green, Orange A, Orange B* and *Red* respectively as nil, minor, medium and severe impacts on important environmental components (IECs).

As per the 2017 amendment, under the Environment Conservation Act, 1995, cable car have been included to the category of industrial units. For solar plants in the capacity range of 50 KW to 1 MW, they will fall under the Green category, while those solar plants with more than 1 MW capacity fall under Orange B category. Orange B Category project need to develop an

IEE along with supporting documents viz. Form 3, feasibility report, NoC from Union Parishad, Emergency Plan and outline of relocation and rehabilitation plan etc.

2.1.3 Environment Court Act, 2000 and subsequent amendments in 2002

An Act to provide for the establishment of environment courts and matters incidental thereto. The Act expedites the establishment of Environment Courts as and where necessary for the trial of offences relating to environmental pollution.

The GoB will establish one or more Environmental Court in each division, constituting of one judge. In consultation with the Supreme Court, the government shall-

- Appoint an officer of the rank of Joint District Judge to dispose of cases only under Environmental laws; and
- If considered necessary, appoint a judge of the rank of the rank of Joint District Judge for a Division, or a specific part of the same. The judge will, in addition to his ordinary functions, dispose cases that fall within the jurisdiction of Environmental Court.
- The Environment Court shall be the competent authority to impose penalty for offences under Section 5A of the Act, and under any other Environmental law, and to pass order for compensation in appropriate cases.
- If a person violates the court order under clause (a) of section 5(2) by repeating or continuing with the offence of which he has been fined, he shall be liable to sentenced with penalty prescribed for that offence, with the penalty not less than that imposed in the first instance of the order.

2.1.4 Bangladesh Water Act, 2013

This Act contains provisions for integrated development, management, abstraction, distribution, use, protection and conservation of water resources. The Act covers water resources such as surface water, ground water and rain water, and also includes flood-plain, wetland, natural or manmade River. According to the Act, all rights over the following water bodies within the state territory, on behalf of the people, is vested with the State-

- Surface water;
- Ground water;
- Sea water;
- Rain water, and
- Water in the atmosphere

Under the Act, a National Water Resources Council is constituted, which will have the following functions:

- to make policies, and provide instructions for integrated development, proper use, safe abstraction, proper distribution, protection and conservation of water resources;
- to give instructions in respect of making National Water Resources Plan and approval of thereof, for ensuring integrated development of water resources;
- + to perform such functions as may be determined by the Council

In violation of any provision of the Act or of any prohibition/protection order or any clearance certificate, if any authority undertakes construction activities which creates impediments in the normal water course or changes the direction of such water course, the Executive committee may issue a removal order to such authority for removing infrastructure, or land filling materials within the time specified in that order.

2.1.5 National Land Use Policy, 2001

The current overarching policy guiding land use in the country is the National Land Use Policy (2001). The main objective of this policy is to define criteria on the basis of which land use will be determined and to provide guidelines for usage of land for the purpose of agriculture, housing, afforestation, commercial and industrial establishments, rail and highway, and for tea and rubber gardens (Hussain, 2015). The key objectives of the Policy are:

- Reforming the current land administration system by introduction of Certificate of Land Ownership (CLO);
- Preventing alarming loss of agricultural land, which is needed to meet the increasing food demand;
- Protecting state owned lands which can be used to meet the needs of developmental projects;
- Zoning of land for agriculture and other purposes;
- Establish a data bank of khas land, fallow land, acquired land, char land, etc.

The Policy lays emphasis on minimizing crop land loss, indiscriminate land use, rationalizing land acquisition, and synchronization of land use with natural environment (Ministry of Land, Input of the MoL for the 'Bangladesh Delta Plan 2100 Formulation Project'). The other key aspects are:

- Rehabilitation of landless people on newly reclaimed land (char land, coastal reclaimed land, etc);
- Reserving government khas land for future development projects;
- Increasing the opportunity of income generation through proper utilization of land resources;
- Protection of natural forest, River s and hill areas;
- Protecting land from pollution

2.1.6 Khas land (Agriculture) Management and Settlement Policy 1997

In 1997, the Government introduced the Agricultural Khas land Management and Settlement Ordinance to redefine the landless as anyone who owns less than 10 decimals of land. Only agriculture based landless families in which one or more members are involved in cultivation are entitled to khas land.

According to the ordinance, the following groups are to receive priority among landless in getting khasland:

- Households having no satisfactory living home
- Poor freedom fighter's family
- Households who lost all land due to River erosion
- Widow/abandoned women with adult son (as per GoB policy)
- Households which neither have agriculture land nor homestead land but fully dependent on agriculture
- 4 Agro-dependent family having homestead land of 10 decimals with no cultivable land
- Households of no fixed address

There are certain types of khasland, which are exempted from distribution. This includes any land which is communally used, such as public roads and highways, River banks, khal, sewage systems, ponds, dighis, graveyards, and burning grounds.

The Ordinance considers two types of settlements: Permanent settlement, and Eksona settlement (also known as duplicate carbon receipt, DCR)

Only the landless agriculture based families are entitled to permanent settlement, which is a 99-year lease settled with the government. In DCR, any family who is in control of a particular land is given control of khas land for one year. It can be converted into a 99-year lease only after it has been made suitable for cultivation.

2.1.7 East Bengal State Acquisition and Tenancy Act, 1950

East Bengal State Acquisition and Tenancy Act 1950 a law relating to tenancies to be held under the state and other matters connected therewith. This Act defined the rights and liabilities of the tenants in relation to their landlords.

Under the scheme of the Act, the government became the only landlord to acquire all rent receiving interest by phases. By operation of section 3 of the Act, all holders of land became directly tenants under the government and they are described as malik (owner), but all interest in subsoil right to minerals, hats, bazaars, forests, fisheries and ferries are vested in the government. The said law authorizes the government to own and manage hats, bazaars, ferries, fisheries, etc.

This Act promotes the goal of retaining the agricultural character of the land by giving cultivators first right of purchase and prohibiting other use. In addition, this Act imposes a private land ceiling of 33.3 acres.

Under State Acquisition of Tenancy Act, khatiyan is prepared in the names of respective tenants directly under the government and the Act provides for a process of updating khatiyan in the names of the persons by transfer, inheritance, and settlement from government. That Act provides a process of pre-emption of land by a co-sharer of contiguous tenant if the transfer is made to any stranger.

The landowner has to establish ownership by producing record of rights, under this Act. This record of rights, prepared under Section 143 or 144 are not always updated and as a result, legal land owners have to face 'difficulties' in trying to prove ownership.

2.1.8 The Registration Act, 1908, amended in 2004

An Act to consolidate the enactments relating to registration of documents, and was aimed to document all immovable property in the country (Ministry of Law, The Registration Act, 1908, 2010). According to the Act, the following instruments (relating to immovable property) are to be registered, if the property to which the instrument relates to is situated in the District in which the Act is in force:

- Instruments of gift of immovable property;
- Declaration of heba under Muslim Personal Law (Shariat);
- Declaration of gift under the Hindu, Christian and Buddhist Personal Law;
- Instruments of mortgage referred to in section 59 of the Transfer of Property Act 1882;
- Leases of immovable property from year to year, or for any term extending more than one year;
- Instrument of partition of immovable property effected by persons upon inheritance according to their respective personal laws;

The law also specifies that any contract for sale of immovable property should be presented for registration within thirty days from the execution of the contract, and shall be executed legally by the parties thereto. In the original framework of the law, registration of land deeds is not compulsory.

Timeline for registration of documents: apart from will, no document of any instrument shall be presented later than three months from the date of execution of such document.

The latest amendment was passed in 2004, aiming to curb land related disputes as well cases of fault registration of land through compulsory registration of land related instruments. According to the amendment, the processes of making deeds, hebas (gift of immovable property) and registrations regarding mortages, purchases and sale of the lands will be easy and transparent. Through this amendment, registration of land deed was made compulsory (New Land Registration Act comes into effect on July 1, 2005).

2.1.9 Transfer of Property Act, 1882

An Act to amend the law relating to the Transfer of Property by Act of Parties. It only deals with transfer of immovable property including certain incorporeal rights by one living person to another by voluntary act (The Transfer of Property Act, 1882, 2010).

The Act specifically deals with certain modes of transfer of properties by way of sale, mortage, gift, exchanges or lease. Any transaction relating to immovable property is required to have a registered instrument under the sub-section (2) of section 30 of the Registration Act, 1908.

2.1.10 Land Holding Limitation Order, 1972, amended in 1982

This Order deals with the limitation of land property by providing a ceiling on the private land holding size. According to this order, the size of the private land holding must not exceed 100 bighas (33.3 acres) if the land is owned by families or individuals. The exceeding land must be returned to the Government. An exemption can be applied in case of land owned by religious organization, farmers' cooperatives or if tea, rubber, cocoa or coffee are being cultivated on that land; or when the land is being taken in account for industrial projects, considered beneficial to the public interest.

2.1.11 Non-agricultural khas lands Management and Settlement Policy, 1995

Under this Policy, the land ministry decided in principle to set up public-private partnership arrangement, for which a department or an agency will be constituted to distribute non-agricultural khas land. According to this policy, Non-agricultural khas land is defined as the khas land under government possession, cultivable or uncultivable, situated in Metropolitan areas, Municipality areas and Upazilla headquarter areas, and also includes uncultivable khas land situated outside Metropolitan, Municipality and Upazila headquarter areas.

Settlement to the public departments or Government agencies:

According to the policy, for any government purpose, the settlement of non-agricultural khas land can be made to any public department or government agencies if they apply and pay the appropriate amount, fixed according to the market price. The market price is to be determ ined based on the territory where the land is located, and the average market price of last 10 land sales, in that Upazilla.

Settlement to private individuals:

The land ministry will allow leaseholders or investors, including developers to build commercial establishments on the non-agricultural khas land, as leased from the Government, for a certain period.

The ownership will return to the Government once the leaseholders have recovered their investment costs plus net return on investment, according to the lease agreement.

2.1.12 Non Agricultural Tenancy Act 1949

The NAT Act defines non-agricultural land as land, which is used for purposes not connected with agriculture or horticulture and includes any land which is held on lease for purposes not

connected with horticulture. This is irrespective of whether it is used for any such purposes or not and a parcel of agricultural land converted into a tenancy by the order of the Collector. This does not include the following:

- (a) a homestead to which the provisions of Section 182 of the Bengal Tenancy Act 1885 (commonly known as the BT Act) apply
- (b) land which was originally leased for agriculture or horticultural purposes but is being used for purposes not connected with agriculture or horticulture without the consent either express or implied of the landlord, if the period for which such land has been so used is less than twelve years, and
- **4** (c) Land which held for purposes connected with cultivation or manufacture of tea.

Non-agricultural land does not include lease of structures with land but the cases of tenants of non-agricultural land, who have erected structures thereon, are governed by the provisions of the NAT Act 1949.

2.2 Relevant National Legal Instruments for the Project

Table 2.1 presents an outline of other National legal instruments that will have relevance to the proposed Project with respect to the social and environmental considerations.

Act / Rule / Law /	Enforcement	Key Features	Applicability to the

2.2.1 Administrative Setup related to Environment in Bangladesh

The Ministry of Environment & Forest (MoEF) is the nodal agency in the administrative structure of the GOB, for overseeing all environmental matters relating to national environmental policy and regulatory issues in the country. The MoEF oversees the activities of the following technical/implementing agencies:

- Department of Environment (DOE);
- Forest Department (FD);
- Bangladesh Forest Industries Development Corporation (BFIDC);
- Bangladesh Forest Research Institute (BFRI); and
- **4** Bangladesh National Herbarium (BNH).

2.2.2 Other Related Organization

There are several other organizations under the administrative framework which would govern social and environmental functions related to the proposed Project, namely:

- Ministry of Land: Land reform and land acquisition directorate;
- ✤ Ministry of water resources: Bangladesh Water Development Board; and
- ↓ Local Government Engineering Department (LGED).

2.3 International Safeguard Requirements

2.3.1 IFC Performance Standards

The Performance Standards (PS) (January 2012) established by IFC stipulates that the Project shall meet certain requirements throughout the life cycle of an investment by IFC or other relevant financial institution such as other Development Financial Institutions (DFI) (e.g. DEG, FMO) or commercial banks, which are signatory to the *Equator Principles*, 2013.

Performance Standards	Specific Areas
Performance Standard 1:	Assessment and Management of Environmental and Social Risks and Impacts
Performance Standard 2	Labour and Working Conditions
Performance Standard 3	Resource Efficiency and Pollution Prevention
Performance Standard 4	Community Health, Safety and Security
Performance Standard 5	Land Acquisition and Involuntary Resettlement
Performance Standard 7	Indigenous Peoples
Performance Standard 8	Cultural Heritage

Table 2.2 IFC Performance Standards

Source: IFC Performance Standards, January 2012

These PS and guidelines provide ways and means to identify impacts and affected stakeholders and lay down processes for management and mitigation of adverse impacts. A brief on the requirements as laid down in the performance standards is described in the following subsections.

Following sub-sections tries to provide the requirements of the specific PS, so as to set up the context for matching the requirements of these PS during the various stages of the life cycle of the Project.

2.3.1.1 PS 1: Assessment and Management of Environmental and Social Risks and Impacts

The *PS 1* requires Social and Environmental Assessment and Management Systems for managing social and environmental performance throughout the life cycle of this Project and runs through all subsequent PSs. The main elements of *PS 1* include:

- A Social and Environmental Assessment to understand the social and environmental impacts and risks;
- A Management Program for mitigating the impacts and minimizing the risks identified in the assessment;
- Establishing and ensuring organizational capacity and requisite trainings to the staff to implement the Management Programme;
- Identification and engagement with range of stakeholders that may be interested in their actions;
- Development and implementation of Stakeholder Engagement Plan that is scaled to the project risks and impacts and development stage and tailored to the characteristics and interests of the Affected Communities;

- Engagement and consultation with the affected communities, subject to identified risks and adverse impacts from a project;
- Informed Consultation and Participation ("ICP") process for projects with potentially significant adverse impacts on affected communities;
- For projects with adverse impacts to Indigenous Peoples, requirement to engage them in a process of ICP and in certain circumstances requirement to obtain their Free, Prior, and Informed Consent (FPIC);
- Implementation and maintenance of procedure for external communications to receive and register external communications from the public, and their Redressal;
- Adequate monitoring and reporting systems to measure and report the effectiveness of the Management Programs.

The social and environmental performance is a continuous process to be initiated by the management and would involve communication between the organization, its workers and local communities directly affected by the Project. The PS requires that Project proponent initiate regular assessment of the potential social and environmental risks and impacts and consistently tries to mitigate and manage strategy on an ongoing basis.

2.3.1.2 PS 2: Labour and Working Conditions

The economic growth through employment creation and income generation is recognized and balanced protecting the basic rights of workers. PS 2 is guided by the various conventions of International Labour Organization ("ILO") and outlines the minimum requirements of working conditions, protection to the workforce (including issues of child and forced labour) and ensuring occupational health and safety of both its 'employees' as well as 'non employees' working through contractors. The PS requires:

- Establishment of a sound worker-management relationship;
- Encouraging equal opportunity and fair treatment of workers;
- Promoting compliance with national labour and employment laws;
- Management of accommodation services with provision of basic services;
- Promoting healthy and safe working conditions for workers; and
- 4 Analysis of alternatives for retrenchment prior to implementing any collective dismissals.

PS 2 requires project proponents to conduct its activities in a manner consistent with the four core labour standards (child labor, forced labour, non-discrimination, and freedom of association and collective bargaining). In addition, PS 2 also addresses other areas such as working conditions and term s of employment, retrenchment, and occupational health and safety issues.

Some of these requirements refer to the applicable national law. Whereas national law establishes standards that are less stringent than those in PS 2, or are silent, the project proponent is expected to meet the requirements of PS 2.

2.3.1.3 PS 3: Resource Efficiency and Pollution Prevention

PS 3 outline a project level approach to resource efficiency and pollution prevention and control in line with internationally disseminated technologies and practices with objectives to:

- Avoid or minimize adverse impacts on human health and the environment by avoiding or minimizing pollution from activities;
- Promote more sustainable use of resources, including energy and water; and

k Reduce project-related greenhouse gas ("GHG") emissions.

Key requirements of *PS3* are to consider ambient conditions and apply technically and financially feasible resource efficiency and pollution prevention principles and techniques that are best suited to avoid or where avoidance is not possible, minimize adverse impacts on human health and the environment during the entire project life-cycle. In addition, a project need to follow good international industry practice ("GIIP"), as reflected in various internationally recognized sources including the World Bank Group Environmental, Health and Safety Guidelines.

2.3.1.4 PS 4: Community, Health, Safety and Security

PS 4 concentrates on the responsibility that must be undertaken by the client to avoid or minimize the risks and impacts to the community's health, safety and security that may arise from project activities. *PS 4* requires a project to evaluate risks and impacts to the health and safety of the affected community during the Project life cycle and establish measures to avoid minimize and reduce risks and impacts from the Project.

A project needs to evaluate the risks and impacts to the health and safety of the Affected Communities during the project life-cycle and require establishing preventive and controlling measures consistent with good international industry practice ("GIIP"), such as in the World Bank Group Environmental, Health and Safety Guidelines (EHS Guidelines) or other internationally recognized sources.

PS 4 recognizes that project activities, equipment, and infrastructure often bring benefits to communities including employment, ecosystem services, and opportunities for economic development. However, projects can also increase the potential for community exposure to risks and impacts arising from equipment accidents, structural failures, and releases of hazardous materials.

The performance standard details out project proponents responsibility to avoid or minimize the possible risks and impacts to community health, safety and security that may arise from project activities.

2.3.1.5 PS 5: Land Acquisition and Involuntary Resettlement

The objectives of this PS are to:

- Avoid, and when avoidance is not possible, minimize displacement by exploring alternative project designs;
- Avoid forced eviction;
- Anticipate and avoid, or where avoidance is not possible, minimize adverse social and economic impacts from land acquisition or restrictions on land use by (i) providing compensation for loss of assets at replacement cost, and (ii) ensuring that resettlement activities are implemented with appropriate disclosure of information, consultation and the informed participation of those affected;
- Improve, or restore, the livelihoods and standards of living of displaced persons;
- Improve living conditions among physically displaced persons through the provision of adequate housing with security of tenure at resettlement sites.

PS 5 require a project to consider various processes and systems to avoid /minimize social and economic impacts related to land acquisition and resettlement.

This PS applies to physical or economic displacement resulting from the following types of land transactions:

- Land rights or land use rights acquired through expropriation or other compulsory procedures in accordance with the legal system of the host country;
- Land rights or land use rights acquired through negotiated settlements with property owners or those with legal rights to the land if failure to reach settlement would have resulted in expropriation or other compulsory procedures;
- Project situations where involuntary restrictions on land use and access to natural resources cause a community or groups within a community to lose access to resource usage where they have traditional or recognizable usage rights;
- Certain project situations requiring evictions of people occupying land without formal, traditional, or recognizable usage rights;
- Restriction on access to land or use of other resources including communal property and natural resources such as marine and aquatic resources, timber and non-timber forest products, freshwater, medicinal plants, hunting and gathering grounds and grazing and cropping areas.

This PS does not apply to resettlement resulting from voluntary land transactions (i.e., market transactions in which the seller is not obliged to sell and the buyer cannot resort to expropriation or other compulsory procedures sanctioned by the legal system of the host country if negotiations fail). It also does not apply to impacts on livelihoods where the project is not changing the land use of the affected groups or communities.

2.3.1.6 PS 6: Indigenous Peoples

PS 7 acknowledges the possibility of vulnerability of indigenous people¹ owing to their culture, beliefs, institutions and living standards, and that it may further get compromised by one or other project activity throughout the life cycle of the project. The PS underlines the requirement of avoiding / minimizing adverse impacts on indigenous people in a project area, respecting the local culture and customs, fostering good relationship and ensuring that development benefits are provided to improve their standard of living and livelihoods.

PS 7 recognizes that Indigenous Peoples, as social groups with identities that are distinct from dominant groups in national societies, are often among the most marginalized and vulnerable segments of the population. The term "indigenous people" is more clearly defined in the IFC Guidance Note for PS 7.

2.3.1.7 PS 7: Cultural Heritage

PS 8 aims to protect the irreplaceable cultural heritage and to guide clients on protecting cultural heritage in the course of their business operations.

PS 8 recognizes the importance of cultural heritage with an objective to:

- Protect cultural heritage from the adverse impacts of project activities and support its preservation; and
- Promote the equitable sharing of benefits from the use of cultural heritage in business activities.

¹ There is no universally accepted definition of "Indigenous Peoples." Indigenous Peoples may be referred to in different countries by such terms as "Indigenous ethnic minorities," "aboriginals," "hill tribes," "minority nationalities," "scheduled tribes," "first nations," or "tribal groups." This Performance Standard applies to communities or groups of Indigenous Peoples who maintain a collective attachment, i.e., whose identity as a group or community is linked, to distinct habitats or ancestral territories and the natural resources therein. It may also apply to communities or groups that have lost collective attachment to distinct habitats or ancestral territories in the project area, occurring within the concerned group members' lifetime, because of forced severance, conflict, government resettlement programs, dispossession of their lands, natural disasters, or incorporation of such territories into an urban area.

The PS requires the project proponent to comply with relevant national law on the protection of cultural heritage, including national law implementing the host country's obligations under the *Convention Concerning the Protection of the World Cultural and Natural Heritage* and other relevant international law.

Based on the available information, the following IFC Performance Standards (2012) are deemed applicable for the project:

Title	Applicability (Y/N)	Justification					
PerformanceStandard1:AssessmentandManagementofEnvironmentalandSocialRisks and Impacts	Y	Based on the review of the available information and the understanding developed as part of the site visits, it is understood that the project is likely to result in certain environmental and social risks and impacts. This Performance Standard shall guide the assessment and management of the impacts identified					
Performance Standard 2: Labour and Working Conditions	Y	The project will direct employees and workers as well as contractual workers for the construction and operation phase. The management of these workers and the project's relationship with them, and risk of occupational health and safety will be guided by the requirements of this Performance Standard					
Performance Standard 3: Resource Efficiency and Pollution Prevention	Y	Certain risks in term s of resource efficiency and environmental pollution have been identified for the project. The requirements of this performance Standard will guide the management of these impacts and minimization of adverse impacts due to the project					
Performance Standard 5: Land Acquisition and Involuntary Resettlement	Y	Based on the review of land procurement presented in Section 3.2, while the overall procurement process may have been planned through principles of willing buyer willing seller, the project will entail involuntary resettlement and potential livelihood impacts, which will require a RAP and LRP to be developed in conformance to IFC Performance Standard 5.					
Performance Standard 6: Indigenous Peoples	N	Presently no Indigenous Peoples groups have been identified as project impacted. Thus, the Performance Standard is assessed as not applicable.					
Performance Standard 7: Cultural Heritage	Y	Presently, a mosque and few burial sites are likely to be impacted as part of the project land take.					

Table 2.3 Trigger of IFC PS

2.3.1.8 IFC Project Categorization

As part of its review of a project's expected social and environmental impacts, IFC uses a system of social and environmental categorization. This categorization is used to reflect the

size of impacts understood as a result of the client's social and environmental assessment and to specify IFC's institutional requirements. The IFC categories are:

- Category A Projects: Projects with potential significant adverse social or environmental impacts that are diverse, irreversible or unprecedented;
- Category B Projects: Projects with potential limited adverse social or environmental impacts that are few in number, generally site-specific, largely reversible and readily addressed through mitigation measures;
- Category C Projects: Projects with minimal or no adverse social or environmental impacts, including certain financial intermediary (FI) projects with minimal or no adverse risks;
- 4 Category FI Projects: All FI projects excluding those that are Category C projects.

IFC categorizes project primarily according to the significance and nature of impacts. IFC defines the project's area of influence as the primary project site(s) and related facilities that the client (including its contractors) develops or controls; associated facilities that are not funded as part of the project (funding may be provided separately by a client or a third party including the government), and whose viability and existence depend exclusively on the project and whose goods or services are essential for the successful operation of a project; areas potentially impacted by cumulative impacts from further planned development of a project; and areas potentially affected by impacts from unplanned but predictable developments caused by the project that may occur later or at a different location. The area of influence does not include potential impacts that would occur without a project or independently of a project.

2.3.1.9 IFC EHS Guidelines, 2007

The Environmental, Health, and Safety (EHS) General Guidelines² (April 30, 2007) will be applicable for this Project. In addition to that, IFC's Sector specific EHS Guidelines for Electric Power Plants³ (December 19, 2008) will also apply.

2.3.2 Equator Principles III (2013)

Equator Principles are set of voluntary guidelines adopted by private financial institutions to ensure that large-scale development or construction projects appropriately consider the associated potential impacts on the natural environment and the affected communities.

The Equator Principles Financial Institutions (EPFI) have their own environmental and social guidelines, which are compliant with the underlying IFC Performance Standards, and WB EHS Guidelines.

Based on the project categorization, the project proponent is expected to meet the requirements, as given below:

For category A and B projects, it is required to-

Conduct a Social Impact Assessment (SIA). The assessment document should propose measures to mitigate, minimize, and offset adverse impacts appropriate to the nature and scale of the project.

² <u>http://www.ifc.org/ifcext/sustainability.nsf/AttachmentsByTitle/gui_EHSGuidelines2007_GeneralEHS/\$FILE/Final+-</u> +General+EHS+Guidelines.pdf

³<u>http://www1.ifc.org/wps/wcm/connect/dfb6a60048855a21852cd76a6515bb18/FINAL_ThO.Creeds</u> <u>al%2BPower.pdf?MOD=AJPERES&id=1323162579734</u>

- Conduct an alternative analysis (when GHG emission is more than 100,000 tons of CO2
- equivalent annually)
- Prepare an Action Plan (AP)
- Establish an environmental & social management system
- Conduct a stakeholder engagement with the project-affected communities
- Establish a grievance mechanism
- Disclose the environmental and social impact assessment report online
- Disclose the GHG emissions quantification (for projects emitting more than 100,000 tons of CO2 equivalent annually)

For all projects, the project proponent will covenant in financial documentation to comply with all relevant host country environmental and social laws, regulations.

For Category A and B projects-

The financial documentation will have to comply with:

- The ESMPs and EPAP (where applicable) during the construction and operation of the project in all material respects.
- Provide periodic reports prepared by in-house staff or third party experts that document compliance with the AP and the host country's laws and regulations.
- **4** Decommission the facilities in accordance with an agreed decommissioning plan.

2.3.3 FMO Sustainability Policy

The sustainability policy sets the FMO commitment for sustainable development, and is applicable for its clients. The policy is the foundation of FMO's Sustainability Management System and guides FMO's internal processes. The selection of clients by FMO is in line with the UN Guiding Principles on Business and Human Rights.

- Principles- FMO requires all clients to comply with applicable environmental, social and human rights laws in their home and host countries. In addition, FMO upholds the following international standards as a part of client operations, as applicable:
 - IFC Performance Standards/WB EHS Guidelines/Equator Principles
 - OECD Guidelines on Multinational Enterprises
 - ILO Declaration on Fundamental Principles and Rights to Work
 - UN Principles for Responsible Investment
 - EDFI Principles for Responsible Financing
 - G20 Principles of Corporate Governance

The IFC PS guide clients to assess the likelihood and severity of impact on human rights as part of their assessment of social and environmental impact.

- Exclusion list- FMO assesses potential investments for the following activities, which is classified as exclusion activities for investment.
 - Forced labour or child labour
 - Production or activity deemed illegal under host country laws or regulations
 - Cross border trade in waste and waste products
 - Destruction of High Conservation Value areas
 - Radioactive materials and unbounded asbestos fibers

- Pornography/Prostitution
- Racist and anti-democratic media
- The client company's activity (10% of earnings) involves alcoholic beverages, tobacco, weapons and munitions, gambling
- FMO ESG risk categorization (following IFC's Environmental and Social Risk Categorization Framework):

Direct Investment	
Category A	Business activities with potential significant adverse environmental or social risks/impacts that are diverse, irreversible or unprecedented.
Category B	Business activities with potential adverse environmental or social risks/impacts that are beyond site boundaries, largely irreversible and can be addressed through relevant mitigation measures.
Category B+	Business activities with potential limited adverse environmental or social risks/impacts that are few in number, generally site-specific, reversible and readily addressed through mitigation measures.
Category C	Business activities with minimal or no environmental or social risks/impacts.

During due diligence FMO executes a thorough ESG assessment on its potential clients. This helps in identifying the main ESG risks and strengths that a client is exposed to, and assess the quality of the client's risk management and mitigation measures.

3. SOCIAL SCREENING AND SCOPING

3.1 Screening

3.1.1 Project Categorisation as Per DoE, Ministry of Environment, Forest and Climate Change, Bangladesh

Depending upon location, size and severity of pollution loads, projects/ activities have been classified in the ECR, 1997 into four categories: *Green*, *Orange A*, *Orange B* and *Red*, respectively, to nil, minor, medium and severe impacts on important environmental components (IECs).

As per the *Schedule-1* of the ECR 1997, corresponding category related to road cable car, falls under *Red* Project Categorization as per IFC Performance Standards.

IFC categorization is used to reflect the size of impacts understood as a result of the client's social and environmental assessment and to specify IFC's institutional requirements. The IFC categories are:

- Category A Projects: Projects with potential significant adverse social or environmental impacts that are diverse, irreversible or unprecedented;
- Category B Projects: Projects with potential limited adverse social or environmental impacts that are few in number, generally site-specific, largely reversible and readily addressed through mitigation measures;
- Category C Projects: Projects with minimal or no adverse social or environmental impacts, including certain financial intermediary (FI) projects with minimal or no adverse risks;
- Letter Category FI Projects: All FI projects excluding those that are Category C projects.

3.1.2 Project Categorization as Per FMO

FMO distinguishes the following E&S risk-categories (following the IFC's Environmental and Social Risk Categorization Framework):

- Category A: Business activities with potential significant adverse environmental or social risks and/or impacts that are diverse, irreversible, or unprecedented.
- Category B+: Business activities with potential adverse environmental or social risks and/or impacts that are generally beyond the site boundaries, largely irreversible and can be addressed through relevant mitigation measures.
- Category B: Business activities with potential limited adverse environmental or social risks and/or impacts that are few in number, generally site-specific, largely reversible, and readily addressed through mitigation measures.
- Category C: Business activities with minimal or no adverse environmental or social risks and/or impacts.

3.1.3 Categorization of the Project

IFC (prospective lender to the project) and FMO (equity investor) consider projects or business activities with "*potential significant adverse social or environmental impacts that are diverse, irreversible or unprecedented*" as Category A.

FMO's Sustainable Policy (2016), also has an interim category of "High Risk B or Category B+", for business activities with potential adverse environmental or social risks and/or impacts that are

generally beyond the site boundaries, largely irreversible and can be addressed through relevant mitigation measures.

Based on O. CREEDS's understanding of the environmental and social impacts of the Teknaf Project, the project is categorized as Category A in keeping with IFC standards based on the following:

- Diverse and Significant: the project is likely to result in significant adverse environmental and social impacts that are diverse and associated with various applicable Performance Standards. These relate to:
 - Impacts on ambient conditions (air, soil and water) during the construction phase
 - Risks of community health and safety due to included traffic, influx of labour and emissions including noise during construction phase
 - Change in the natural drainage in the are due to the construction of a flood embankment at site, development of the project on a flood plain and filling of local village ponds (used for bathing, washing and for pisciculture) within the project site
 - Land procurement and use change of 183 acres of land identified for the solar park area
 - Physical and economic displacement of 71 PAHs (more than 300 PAPs) living within the solar farm site
 - The project will also result in the economic and livelihood impacts on approximately 299 households along the transmission line
 - The project will impact at least one cultural site of local significance along with multiple burial sites within homestead areas;
 - Impacts from associated facilities including transmission line and access road
 - Impact to the modified ecological habitats (aquatic and terrestrial), flora and fauna within the project site and immediate surrounding areas

The significance of these impacts is assessed based on the likelihood of the impact and the severity of impact on the receptors resulting from such an occurrence. While the impacts from ambient conditions, community health and safety and natural drainage, flora and fauna are assessed as medium in O. Creeds s of significance, impacts related to land procurement, physical and economic displacement and impact on cultural sites is assessed as Major or high.

Largely Irreversible: Through the SIA and RAP & LRP specific mitigation measures will be identified and implemented. These mitigation measures, if implemented in keeping with the international good practices; will result in the reduction of severity & magnitude and thus overall significance of impacts. However, it is unlikely that these mitigation measures will reverse the impacts from the project completely; i.e. residual impacts for these receptors are likely to remain. the impacts on existing livelihood patterns are likely to be irreversible due to the lack of availability of natural resources such as agricultural land and a transition time of at least two or three years (to be confirmed further to completion of data analysis) before livelihoods are restored. The other largely irreversible impact is likely to be in the effects of the impacts on the cultural site and burial sites in the project footprint area.

3.2 Scoping

3.2.1 Identification of Potential Environmental & Social Impacts

Potential environmental and social impacts have been identified through a systematic process whereby the activities (both planned and unplanned) associated with the construction and operation of the Project have been considered with respect to their potential to interaction with sensitive environmental and social resources or receptors. Scoping of potential impacts has been undertaken in two stages:

- Stage 1: Identification of potential interactions between project activities and environmental receptors; and
- Stage 2: Prioritization of these interactions in terms of their potential to cause significant impacts taking into consideration the current knowledge of project activities, and the existing condition/ sensitivities of environmental and social baseline.

The approach taken and outcomes for each stage are discussed in the subsequent section.

3.2.2 Scoping Matrix

The Scoping Matrix enables a methodical identification of the potential interactions each Project activity may have on the range of resources/receptors within the Area of Influence for the Project.

The matrix consists of a list of resources/receptors that could be affected by the Project activities, set against a list of Project activities. Entries in the matrix cells are coloured to indicate whether:

- An interaction is not reasonably expected (white);
- An interaction is reasonably possible but none of the resulting impacts are likely to lead to significant effects (grey); or
- The interaction is reasonably possible and at least one of the resulting impacts is likely to lead to an effect that is significant (black).

All potential interactions, regardless of probability of occurrence, are considered at this stage

Table 3.1Scoping Matrix of Potential Interactions

Project Activity/ Hazards									
	Social Resources								
	Demographics (i.e. Displacement)	Economy & Livelihoods	Social & Cultural Structures	Land Use (including Economic Displacement)	Infrastructure & Services	Cultural Resources	Community Health & Safety	Vulnerable Groups	Social/ Community Cohesion
Land acquisition/ purchase / lease									
Construction of Site Link Road									
Site development -filling, levelling & compaction									
Transportation of construction materials									
Transportation of lime, bituminous materials, and cement, and miscellaneous materials and ancillary facilities									
Foundation excavation, piling and construction for solar mounts, site office, Transformer									
Electrical cable laying and installation of PV module									
Transmission tower installation and stringing of wire									
Storage, handling and disposal of waste									
Storage and handling of chemicals (unplanned release)									
Generation of sewage									
Influx of construction workers									
Sourcing of water								<u> </u>

Regular Inspection and Maintenance of equipment									
Decommissioning									
Removal of PV Module									
Removal of ground mounted structures, ancillary facilities									

= Represents "no" interactions are reasonably expected

= Represents interactions reasonably possible but none of the outcome will lead to significant impacts

= Represents interactions reasonably possible with one of the outcomes leading to potential significant impact

3.3 Social Impacts

The interactions with resources/ receptor has been discussed in the following section.

- Change in land use: Only private double-cropped low laying agricultural land or waste land will be utilized for the project and therefore there will be a change in land use from agriculture to non-agricultural purpose. It should be noted that in the government records, the land is characterized as non-agricultural land, as it does not support triple cropping and more.
- Occupational Health and Safety: Occupational health and safety hazards can include construction machinery, handling of electrical instruments, noise pollution and dust pollution. In the case of spills/leaks there is a potential for fire hazards and some hazardous substances.
- Local Economy and Employment: The new economic zone will generate employment opportunity for local people mostly during construction phase as well as for cleaning, grass cutting and security related works during operation phase.
- Land Based Livelihoods and Physical displacement: the project will result in the physical and economic displacement of the land users residing in the area. The land owners and users along the new pucca route, the project is likely to impact the neighboring settlements and bazar.
- Community Health and Safety: The community health and safety may arise due to changes in environmental quality, increased prevalence of disease and increase in traffic movement for transport of cement, cement mortar and cement concrete, machine and binders like lime, bituminous materials, and cement, and miscellaneous materials.
- Cultural resources: the project land take will result in an impact on several mosque and temples and few burial sites (within individual homesteads).
- Vulnerable Groups: The vulnerable land users who are below the poverty line, elderly or women headed household s are likely to be differentially impacted due to the project land take.

4. SOCIAL BASELINE CONDITIONS

4.1 Introduction

This section describes the existing social baseline of the study area, which include the proposed Project site, and in a 5 km radial area around the proposed project site. This includes relevant components of socio-economic environment.

The purposes of describing the environmental settings of the study area are:

4 To understand the project needs and social characteristics of the area; and

➡ To assess the quality of the existing environment, as well as the social impacts of the future developments being studied.

4.2 Study Area

The study area has been delineated based on the Area of Influence (AOI). The AOI of the Project comprises of the Project Site and the surrounding area, where influence of the Project activities is anticipated. The areas likely to be affected by the Project and its associated activities may include:

- The project activities and facilities that are directly owned, operated or managed by the project proponent (including by contractors) and that are components of the project, such as the road construction.
- Impacts from unplanned but predictable developments caused by the project that may occur later or at a related location such as increase in traffic on the approach road;
- Impacts on biodiversity or on ecosystem services upon which affected communities' livelihoods are dependent.

Study area map is presented in Figure 4.1

Figure 4.1 Project Study Area

4.3 **Project Influence Area**

The Area of Influence (AOI) of the Project comprises of the project site and the surrounding area, where influence of the project activities is anticipated. The AOI with respect to the environmental and social resources was considered based on the following reach⁴ of impacts:

- Air Quality: Gaseous pollutants (e.g. NOx and SO₂) and fine particulate matter (PM₁₀ and PM_{2.5})-typically up to 2-2.5 km from projects construction; and Dust fall -typically up to 200 m from construction activities.
- Noise: Noise impact area (defined as the area over which an increase in environmental noise levels due to the project can be detected) –typically 500 m from operations and 100 m from the access roads.
- Water: Ground water in 1-2 km radius of project footprint.
- Flora and Fauna (Terrestrial and Aquatic):
 - > The direct footprint of the project comprising the project site.
 - The areas immediately adjacent to the project footprint within which a zone of ecological disturbance is created through increased dust, human presence and project related activities. This kind of disturbance has been estimated to occur within the project footprint and surrounding areas of about 500 m from the activity areas. In certain cases, if any significant impact is identified along the transmission line or access road, the study area will be extended upto 2 km.
- Socio-economic: The direct footprint of the project and its associated facilities, including access road
 - The areas within 2 km radius of the site and 500 m from the access roads and. This is based on the understanding that most of the interactions from the project will be limited to this area.

Based on the above the AOI for environmental and social studies is limited to 2-5 km from the Project site and 500 m, (extendable to 2km) for the access road.

Baseline environmental and social study was conducted during March-September 2020. In addition to this, additional socio-economic data was collected as part of the Resettlement Action Plan development in September 2020.

4.4 Approach and Methodology

The baseline data was collected through primary and secondary source of information with reference to the scope of work. This data is collected through a concerted effort of:

- Field visits;
- Scoping study conducted by Onushandhani Creeds Ltd.;
- Household survey within the project area

⁴ Distance based on O. CREEDS 's experience with similar projects

- The socio economic environment has been studied through social surveys, consultations with various stakeholders and the Focus Group Discussion (FGD) in the villages within the study area.
- Additionally, socioeconomic data have been obtained from the Census of Bangladesh reports.

4.4.1 Baseline Data Collection

The following table summarizes the key sources of information pertaining to each aspect of the baseline:

Aspect	Source
Social Baseline	
Socio-economic and cultural	Secondary data
context	
Land tenure and livelihoods	Household Survey and Stakeholder Consultations
Natural Resources Dependence	Stakeholder Consultations
Community support for the Project	Stakeholder consultations
Infrastructure Mapping	Key Informant Interviews
Gender	Household Survey and Stakeholder Consultations
Vulnerable Social Groups	Household Survey and Stakeholder Consultations
Social/societal infrastructure	Stakeholder consultations

Table 4.1 Sources of Information for the Baseline

4.4.2 Socio-economic Baseline

The socio-economic baseline is based on a combination of quantitative and qualitative data. The socioeconomic baseline includes administrative profile, demographic profile, and social structure, livelihood, and infrastructure details. The socio-economic profile will present the socio-economic data in district, union and village level. In addition to the review of the census data, focus group discussions (FGD), key informant interviews (KII) and household data were undertaken with the following stakeholders:

- Local community
- ↓ Land owners and users impacted by the project
- District, Union Parishad level offices.

4.5 Social Environment

This section provides the socio-economic profile for the project in terms of a brief division profile, district and sub district profile, Union Parishad profile and the profile of the villages in the project footprint area. This baseline is based on the secondary information available and the consultations with the local community and other external stakeholders. The Resettlement Action Plan for the project provides the detailed socio-economic profile of the project affected households identified.

Table 4.2 Sources of Information for Baseline

Baseline Area	Source of Information
Teknaf District	Census Data 2011
Project Area (Villages touched by the project)	Census Data 2011 Households Survey Focused Group Discussions Participatory Rural Appraisal Techniques

4.5.1 Approach

For the purpose of establishing the social baseline for the project and undertaking the social impact assessment of the project, a phased participatory approach was adopted. Through this approach, an attempt was made to integrate the local understanding and perspective into the impact assessment process and identification of the mitigation measures. The purpose of such an approach was to allow for:

- The triangulation of the information available from secondary sources through the information made available by the local community, both qualitative and quantitative;
- Formulation of the socio-economic baseline on the basis of a combination of primary and secondary qualitative and quantitative data;
- An understanding to be developed of the local community's perception of the project and its activities and the possible impacts from the same and the desirable mitigation measures;

4.5.2 Profile of Division, District and Sub-District

The project is located in the Jaliwar dwip, Sabrang Hill and Hatiarguna, Domdomia Village of Teknaf District of the Chittagong Division. The Chittagong Division is geographically the largest of the eight administrative divisions of Bangladesh. It covers the south-eastern most areas of the country, with a total area of 33,771.18 km2 (13,039.13 sq. mi) and a population at the 2011 census of 28,423,019. The administrative division includes mainland Chittagong District, neighboring districts and the Chittagong Hill Tracts.

Chittagong Division is home to Cox's Bazar, the longest natural sea beach in the world as well as St. Martin's Island, Bangladesh's sole coral reef.

Chittagong has a population of more than 2.5 million and its Metropolitan Area has a population of 4,009,423. By gender, the population was 54.36% male and 45.64% female, and the literacy rate in the city was 60 percent, in 2002. Muslims at 86% form the overwhelming majority of the population and rest being 12% Hindus and 2% other religions.

The following table provides the summary of the socio-economic profile of the Division, District and sub-district.

Variables	Chittagong Division	Teknaf Sub district District
Area (sq. km)	16185.01	6,116.11 sq. km

Table 4.3 Profile of Division, District and Sub-district

Variables	Chittagong Division	Teknaf Sub district District
Total Population	1,57,87,758	6,20,214
Males	78,81,824	325 822
Females	79,05,934	294 392
Total Households	38,17,664	128 496
Rural Households	33,33,437	92793
Urban Households	3,75,227	33621
Average Household Size	4.1	4.56
Sex Ratio⁵	99	111
Population density ⁶ (sq. km)	975	97
Total Literacy Rate ⁷ (percent)	47.2	49.73
Male Literacy Rate (percentage)	50.6	56.42
Female Literacy Rate (percentage)	43.8	42.36

Source: Bangladesh Population and Housing Census-2011

The population profile of the division is reflected across the district as well as the sub-district. A majority of the population as characterized as rural population. The literacy rate at the division level is 47.9 percent which is below the literacy rate (51.77 percent) of the country. The sex ratio in the division, at 99 males per hundred females is lower than the national level, which is 100 male per hundred females, according to the population and housing census 2011 data.

The district has an average household size of 4.56 individuals, and a sex ratio of 101 males per hundred females, which is comparable to the national average (100 male per hundred females). Covering approx. 1546.59 sq. km, the population density is 1186 persons per sq.km.

⁵ The definition is based on the Population and Household Census, prepared by Bangladesh Bureau of Statistics

⁶ Population Density is a measurement of population per square kilometer

⁷ It denotes ability to write a letter in any language. Literacy status assessment made for population 7 years and over.

4.5.3 Socio Economic Profile of Project foot print area

This section provides the socio-economic profile of the villages identified in the project footprint area. Of these, Hatiarguna and Domdomia these two villages are impacted by multiple project components and is thus discussed separately.

Domdomia village is located at a Bazar Area namely Porjoton Bazar Area, in the Nila Union in Teknaf District, Cox's Bazar Division. The village, is dependent on business. Their main income source is Tourism related business. Fishing and agriculture are the second source of income. The major crops grown are rice, maize, potato, chilly and other seasonal crops. The major occupation of the people is business followed by daily and wage labour. Fishing is also one of the most important livelihood activity carried out by few household residing in Domdomia Para.

Hatiarguna village is located at floodplains of Naf River. The access road to the village is through LGED Road or Old Marine Drive Road. Household survey was conducted at this village. Compared to the Domdomia Para the Haatiarguna village is more undeveloped and literacy level is low. Most of the people of this village are unemployed.

Figure 4.2 Occupation of the people of the Project site

Among 37 Household surveyed, most of the people said they are involved in Business (10%). Tourism business and Fish business is most important source of income. Some people were

involved agriculture (6%). On the other hand, most people remain unemployed. About 16% population is unemployed at the surveyed project area.

4.5.3.1 Age & Gender Classification of population

In the surveyed two villages, the dependent population aged between 0 to 14 years and 60+ years constitutes nearly half (60 percent) of the total population, which is higher in comparison with the dependency ratio (i.e. 45.8 percent of the total population) in the union. The economically active section of the population (15-59 years) comprises of 40 percent of the total population.

The ratio of male and female is subsequently 54% and 46% among the surveyed household.

Figure 4.3 Gender Classification of the Surveyed Household

4.5.4 Housing ownership, pattern and family size

4.5.4.1 Ownership of Households

Household data shows that the families staying in them own majority of the houses, while a minor share of families live on rent-free accommodation. The implication of this data is important from the point of view that relocation of households due to project will, unavoidably involve loss of ownership of housing structure, and the same has to be compensated by the project.

Villages	No. of Households	Owned (percent)	Rented (percent)
Domdomia	20	96	0.7
Hatiarguna	40	98.7	0.4

Table 4.4 Percentage of Tenancy of House in Project Footprint Area

4.5.4.2 Settlement Pattern and Housing Structure

Among the surveyed households, the common form of settlement is dispersed settlement of single-story kutcha houses, constructed with tin sheds, with scattered pattern of households in the area. Footpaths or earthen roads connect the scattered households in the area. Maximum number of households are made of mud, with tin roofs, and bamboo/straw walls. Due to River bed erosion, families use light materials for housing structure. Internal roads in the villages are kutcha, without proper drainage or sanitation facilities, to collect wastewater. As per consultation with the community in Domdomia and Hatiarguna, approximately 80 percent of the residential structures are Kutcha, 20 percent semi Pucca type.

Figure 4.4 Settlement Pattern in Project Area

4.5.4.3 Family Type and Size

As per Census 2011, the average number of people per household was five (5) which is similar with the national average household size in Bangladesh (4.5%) From among the villages in the project area Domdomia, followed by Hatiarguna. As per consultation with the local community, the main reason for smaller family size is most likely the result of the migration of population in the search for better economic opportunities, both within and outside the state, especially among the younger population. In addition, this is reflective of the growing preference of nuclear families within the community.

Amongst the households surveyed, the most commonly reported household size is 5-10 members. The most common practice as observed during consultation with the community, newlywed prefer establishment of a separate household. In such cases household with adequate land holdings set up their new houses besides their parents houses.

Family size	Households surveyed
0-5	10
5-10	27

Table 4.5 Family Size amongst Households surveyed

4.5.5 Religious and Social Group Dynamics

As per the Population and Housing Census Data of 2011, the major social groups are Muslims and Hindus. Across the project area majority (99.99%) of the religious groups across the project area are Muslim.

Among the Households surveyed, no ethnic people have been identified in the project area. The main religion in the area is Islam, with 98 percent of the total Households surveyed are Muslim.

4.5.6 Education and Literacy

The literacy status of the project footprint area shows that Domdomia has the better literacy rate as compared to the other village Hatiarguna in the project footprint area.

The household surveyed shows that about 45 percent of the populations are literate⁸, which is lower than the national level and sub district level (59.09 percent⁹). The major reason for dropout is the poor economic condition of the household, which could not afford to send their children for higher education. Secondly the lack of road infrastructure and connectivity forced parents to drop out their children especially girls from sending their children to school. The other reasons are likely to include lack of interest in the education, early engagement of children in the livelihood earning activities to support their families and the early marriages of girls in the area.

 $^{^{8}}$ The literacy rate is calculated for population of $\ 7$ years and above of age

⁹ Source: Report on Education Household Survey 2011, by Bangladesh Bureau of Statistics

Figure 4.5 Percentage of Literacy Level of Individuals

The main reasons for the low participation of Individuals in higher education reported by the local community are the non-availability of the schools and colleges in the immediate vicinity, economic conditions of the population and the prevalence of early marriage in the community.

During the consultation, the youth have stated reasons for dropping out or not pursuing further studies were:

- Lack of higher educational infrastructure in the immediate vicinity of the settlements and making travel/daily commuting essential to access educational infrastructure;
- Economic need for involvement of children in household chores and agriculture and need to extend helping hands towards their family;
- Marriage in the age group 15 to 22, and the need to start earning after getting married, both among women and men;
- Higher costs of higher education;
- Lack of awareness of parents, who discourage their children from pursuing further education;
- Lack of parental education and less expectation for girls' education;
- There is high dropout rate recorded among girls during between the age group between 14 to 18yrs. These were also consider the ideal age of marriage for girls by the local community. Girls normally drop out between Class 5 and Class 8;
- Lack of good roads and communication facilities restricted many students from going to schools. This is common among girls whereby they are forced to drop out from schools due to security reason and were given away for marriage; and
- Boys drop out between class VIII and class X due to poor economic condition in their family and the needs for contribution in livelihood activities.

4.5.7 Livelihood Profile

4.5.7.1 Farm based livelihood

The livelihood in the project area is heavily dependent on Business. People are mainly engaged with Fish business, Product import and export and other different forms of business. The livelihood in the project area also depends on Agriculture, which yield two annual harvest or sometime three in the area. In this agricultural setting, the local employment remain limited to agricultural harvesting period or seasonal livelihood. Other livelihood activity are livestock rearing and labour work.

Besides agriculture, livestock is another major livelihood of a family mainly undertaken by the female members in the households. The major livestock reared in the area are Cattle, Goatery, poultry, duck buffalos and Pigeon. Livestock is primarily used for self-consumption. Food production from the livestock sector include meat (beef, poultry, etc.), dairy product and eggs. However, there are some households, which are using livestock as a source of income.

Daily labour is another livelihood activity carried out by the households in the project area. Both agri wage labour and non-farm daily labour is carried out in the project area. Besides seasonal daily labour is very common in the project area. As per consultation with the community in the project area, people migrated to Dhaka, Rajshahi, Lalmonirhat, and Chittagong for daily work and work in construction related works, riskchaw pullers etc. This happens mainly during lean season; men went out to neighboring districts for work for about 30 to 60 days. Daily labour within the union are also very common, this includes mainly agricultural wage labour, and house construction etc.

As per the household survey, Individuals are dependent upon farm based, with farm-based livelihoods playing a critical role, with 22.5 percent of total. The female participation is very low as only 1.57 percent (4 individuals) of the total female population are involved in agricultural activity. Even the overall participation of women in the economic activity is very low as almost half (48.24 percent of the total female population) of the female population are reported as homemaker. This can be inferred as low representation of female participation in economic activity is resulted due to most of them are involved in household activity, which is not accounted as an economic activity in the area by the local people.

Among the household surveyed 86 percent of the Households reported double cropping, 11 percent reporting cultivation of three crops or more in the last year. Only two household (2 percent) have reported single cropping.

Most of the agricultural land in the project foot print area is observe as irrigated land, as produces on an average of two crops in a year. The primary source of irrigation in the area is through surface water and ground water, i.e. from Naf River and through tube-well. Most of the households were reported to be able to afford to get personal tube well.

4.5.7.2 Fishing

As per the household survey data, 2 percent of the total households have have reported that they are involved in the fishing activity. Fishing by community in the project site are mainly done in small-scale in the pukur near to their households. Fishing for commercial activity is also carried out in the Naf River, canal and Ponds on lease basis.

"Behur/Ber Jal" is reported to be the most commonly used fishing gear. The fishing nets cost 25000 BDT (the medium quality Behur jal cost 95 BDT per ft and good quality fish net cost 400 BDT per g), the nets is replaced after every 6 month seasons. Small traditional boats are used by the fishermen. Each boats is shared between three to four fishermen. The type of fish catch

are Boirali, vagna, Aair, Boal, Chitol, Bagair, Kol Baush, Khotti Putti, Calcium fish, Gulsha etc. Boiralli is reported to be the most common catch available throughout the season.

Discussion with the fishing community who undertake fishing along the Naf River reported that there has been a decrease in the fish catch over the last one year due to the presence of many. Secondly, the quality of fish net is poor and the fishermen could not afford to procure good quality net as the cost attached to it very high.

Fishing is also carried out in private ponds, whereby fishermen would seasonally rent the ponds available in the nearby villages and union. In this system, the owner of the pond would lease/rented out the pond for carrying out fishing on commercial purpose. For every mound despite the variety of fish catch, fishermen have to pay 400 BDT to the pond owners. This kind of activity is mainly carried out twice a year mainly during April and September to October.

4.5.7.3 Dependence on Natural Resources

The different natural resources found in the project area are fruit trees, timber trees, bamboo, sand, and fish. Community dependency on natural resources in the project-affected areas were mainly for food security, daily usage and very limited use of natural resources for income source.

Source: Baseline Household Survey 2020 and the FGDs & consultation with the local communities.

4.5.8 Non-Farm Based Livelihood

The dependence on non-farm-based livelihoods is higher among the15 to 35 age group. Most of the households head are involved in farm-based livelihood, however, 22 percent of the total head of households are involved in another non-farm based such as business, wage labour as a primary and secondary of livelihood.

The non-farm based occupation amongst Households surveyed are:

- Non-agricultural wage Labour;
- Rent collection;
- Small businesses;
- Regular Salaried job;
- Government job;
- Muazzin of Mosque; and
- Physician;

4.5.9 Economic Profile

4.5.9.1 Income and Expenditure

The income expenditure analysis is based on the overall context that the economic activities, primarily agriculture is subsistence based, wherein, the households earn enough to fulfill their basic requirements. The major source of income for the households are agriculture, livestock, fisheries, wages and businesses. Of the 37 Households surveyed, there are only one femaleheaded household, which is solely derived from agriculture, and allied activities.

The avgerage annual income levels for the 37 Households surveyed, is in the range of BDT 1, 00,000 - 2, 00,000 per year. The peak income is observed at around BDT 3, 00,000. The monthly income and expenditure is shown below in a pie chart.

Figure 4.6 Monthly Income & Expenditure of the Household Surveyed Area

Source: Baseline Households Survey, 2020, World Bank International Poverty Line (based on 2011 PPP) *USD equivalent income/day/person: Total annual income/exchange rate (2019)/365/Number of family members

The combined graph given above shows the comparison of the monthly average income of the households, with national and international poverty line. The three concepts are define as below:

- The Household Income and Expenditure Survey defines two poverty lines- food poverty line, which consists of a basic food basket (eleven items) and the cost of acquiring the basket; Non-food poverty line, which is estimated as the cost of consuming non-food items by the household close to the food poverty line;
- The two poverty lines are defined- lower poverty line (LPL) where households' food plus non-food expenditure is less than the food poverty line, and the upper poverty line (UPL) is estimated by adding together the food and non-food poverty line. The available data for these two poverty lines as per HIES is available for 2010, which have been extrapolated for 2016, based on inflation trend. The two figures are BDT 4068 (LPL) per month, and BDT 4894 (UPL) per month;
- The international poverty line is defined as (USD 1.9 per day/person) (World Bank Forecasts Global Poverty to Fall Below 10% for the First Time, 2015). For the sake of comparison at same units, the poverty line has been derived as monthly figures in BDT term s, based on current exchange rate (one USD= 84.708 BDT) as BDT 4896 per month.

4.5.10 Health, Hygiene, and Sanitation

4.5.10.1 Health Care and Health Infrastructure

The Access to primary healthcare is limited within the project footprint, resident have to travel to Dimla in order to access basic services. For accessing hospital, treatment or secondary care requires to travel to Jaldhaka, Nilphamari and Rangpur. Discussion with the community reveal that they also rely on traditional medicine or healers for minor ailments. Due to the unavailability of transport in the project area, almost all of the people have to walk to the nearest health center.

Common ailments and diseases

Community members in Domdomia Para and Hatiarguna Village, reported that there are no diseases in their area. The few commonly reported diseases include common fever and cold, skin rash/itches etc.

Some of the healthcare challenges listed by responders in the project area include:

- No ambulance services; and
- Lack of transport facilities.

Drinking water and sanitation

In the project area, the main drinking water source in the project area is mainly tube-well. As per the Population and Housing Census data of 2011, reveal that 90% of the households are access drinking water source from tube-well.

Discussion with the local community reveal that the area in Domdomia and Hatiarguna reveal that they don't have good access to drinking water. Women reported that they do not require going out and travel for water as it is available at source. The depth at shallow tube well at which the water level can be found is reported to be 100-150 ft. Shallow tube well is also reported to be used for drinking water. The major difficulties faced is the contamination of water due to water logged, as a result the water was polluted and not fit for consumption. The water quality is very bad and the Iron concentration in the water sample was high.

4.5.11 Views Regarding Naf Tourism Park

4.5.11.1 Cultural Shift & Knowledge Regarding Naf Tourism Park

Discussion with local stakeholder and the village people revealed that most of the people think that there will be no cultural shift after the installation of Naf Tourism Park. !6% people of the total surveyed area think that there will be a cultural shift but that too in appositive way.

Figure 4.7 Locals' Opinion about Cultural Shift

Figure 4.8 Knowledge about Naf Tourism Park

Among the 37 household surveyed most (92%) of the local stakeholders think that they will be benefited from the project. From their opinion, they think that their economic condition will improve and the infrastructure of the project area will be developed. As it will be a tourist spot so the whole project area will be developed and beautified

Figure 4.9 Benefit From the Project

Figure 4.10 Household Survey Locations

4.5.11.2 Key Informant Information

SI No	Key Informant	Designation	Area	Contact Number
1	Tajul Islam	Shovapoti , Tourism Business	Domdomia, Nila Union	01985346547
2	Rafiq Rana	Member, School Managing Commitee	Domdomia Nila Union, Teknaf	01754112275
3	Jahed Hossain	President , Bazar Commitee	Parjatan Bazar	01818816899
4	Mohammad Yunus	Principal , Karachipara Madrasa	Hatiarguna, Teknaf	01813909338

Table 4.7 Key Informant Information

Discussions were held with these four key informant to know their views regarding the Cable Car project. The outcome of the discussion can be summarized as follows:

- ✓ People will be benefited by this project in many ways
- ✓ This project have positive socio-economic impact
- ✓ There will be new job opportunities
- ✓ There will be more business options

They also claimed that they want this project because of their own benefit. As it will be tourist attraction they want that there must be an enhancement of law enforcement and security of the local people should be checked. They also confirmed that there will be no cultural shift due to the implementation of the project.

Conducting KII

Figure 4.11 Discussion with Key Informant

They also shared us the land price of the project location. Most of the lands are owned by Forest Department Government of the People's Republic of Bangladesh and some lands are owned by individuals. The details of land pricing are given in following table.

LAND TYPE (By Ownership)	LOCATION	UNIT (Kani)	LAND PRICE (BDT)
Owned by Forest Department Government of the People's Republic of Bangladesh	Karachi Para	1	30 Lakhs
Individual Owned Property	Domdomia	1	80-90 Lakhs
Individual Owned Property	Domdomia	1	80-90 Lakhs

 Table 4.8 Land Pricing of Project location

Figure 4.12 Focus Group Discussion Location

5. PUBLIC CONSULTATION

A stakeholder is defined as "an individual, group, or organization, who may be affected by, or perceive itself to be affected by a decision, activity, or outcome of a project".

"Stakeholder Analysis" is the process of sorting identified stakeholder groups according to their impact on the project and the impact the project will have on them. This information is then used to assess the manner in which the interests of the stakeholders or projects impact on them should be addressed in the project development plan or its operation. This section of the report describes the stakeholder engagement process undertaken as part of the SIA.

5.1 Scope and Specific Objectives

The broad objective of the stakeholder engagement and involvement process is to provide authorities, as well as interested and affected stakeholders with the opportunity to identify issues, concerns, and opportunities regarding the proposed project and to address key stakeholder concerns during the preparation of the SIA for the project. Specific objectives for stakeholder consultations are as follows;

- To address relevant issues including those perceived as being important by other sectorial agencies, public bodies, local communities, affected groups and others;
- To improve information flows between proponents and different stakeholders, improving understanding of a project;
- 4 To identify important environmental and social characteristics or mitigation opportunities;
- 4 To ensure that the magnitude and significance of impacts has been assessed properly; and
- Improves the acceptability and quality of mitigation and monitoring process.

5.2 Identification of Stakeholders

The stakeholder identification is one of the most important processes throughout the project life cycle and documenting relevant information regarding their interests in the project, independencies, influence, and potential impact on the project. Stakeholder vary in O. Creeds's of degree of interest, influence and control they have over the project. While those stakeholders who have a direct impact on, or are directly impacted by the project are known as Primary Stakeholders, those who have an indirect impact or are indirectly impacted are known as Secondary Stakeholders. Identification of stakeholder was carried out by Onushandhani Creeds Ltd. in discussion with CUET. Keeping in mind the nature of the project and its setting, the stakeholders have been identified and listed in the table presented below:

SI. No.	Stakeholder Group/Category	Key Stakeholders	Description of the Stakeholder Profile
		Primary Stakeholders	6
1	Project Affected Persons (PAPs)	 Impacted Land Users Impacted Land Owners Impacted Rent Collector Vulnerable households 	 This stakeholder group comprises of the Project Affected Households (PAHs) and Project Affected Persons (PAPs) who owned land inside the project footprint and those along the tower footprint. The PAPs also comprises of land users who are residing and carrying

Table 5.1 List of Key Stakeholders

SI. No.	Stakeholder Group/Category	Key Stakeholders	Description of the Stakeholder Profile
			out cultivation inside the project footprint and the Right of Way (RoW) of tower.
2	Institutional Stakeholders	 Religious Authorities associated with Mosque Local Administration- Union Parishad and Mouza Regulatory Authorities 	 This stakeholder group includes the management authorities of the mosques located inside the project footprint. This stakeholder group comprises of regulatory authorities at the district, state and national level that are responsible for various pERM its and licenses pertaining to the Project.
3	Other Primary Stakeholders	 Bangla Sun Solar Energy EPC contractor 	This stakeholder group i.e. BSSE, is the Special Purpose Vehicle (SPV) that has been incorporated for the project. They are responsible for ensuring the effective implemnentation of the RAP and that the affetced person are properly compensated and impacts are mitigated
		Secondary Stakeholde	rs
4	Local Community	 Local community residing near the project footprint Agricultural Labourers Vulnerable Community 	 This stakeholder group comprises of the community residing near the vicinity of the project area. This group is expect to be indirectly impacted by the Project activities but may be indirectly impacted.
5	Institutional Stakeholders	 Land and Revenue Department Survey Department Relief and Rehabilitation Department Irrigation Department Agriculture Department Fisheries Department Forest Department 	 This stakeholder groups comprises of expert on different sector for providing inputs and information which are crucial for designing the resettlement site, and livelihood restoration measures These groups of stakeholders will serves as support system for technical guidance and collaborative agency while implementing the RAP
6	Other secondary stakeholder	 Local NGOs Land Aggregators 	
7	Project Financing Agencies/ Institutions	 Financers and Investors 	 This stakeholder group includes International Finance Corporation (IFC) and other investors who are

SI.	Stakeholder	Key Stakeholders	Description of the Stakeholder
No.	Group/Category		Profile
			evaluating a potential investment opportunity into the Project.

5.2.1 Stakeholder Mapping

Stakeholder Mapping is a process of examining the relative influence that different individuals and groups have over a project as well as the influence of the project over them. The purpose of a stakeholder mapping is to:

- **4** Study the profile of the stakeholders identified and the nature of the stakes;
- Understand each group's specific issues, concerns as well as expectations from the project that each group retains;
- **4** Gauge their influence on the project.

Based on this understanding, the stakeholders are categorized into High Influence/ Priority, Medium Influence/ Priority and Low Influence/ Priority. The stakeholders who are categorized as high influence are those who have a high influence over the project or are likely to be heavily impacted by the project activities, and are thus high up on the project proponent's priority list for engagement and consultation.

Similarly, the stakeholders categorized as medium influence are those who have a moderate influence over the project or even though they are to be impacted by the project, it is unlikely to be substantial and these stakeholders are thus neither high nor low in the project proponent's list for engagement. On the other hand, the stakeholders with low influences are those who have a minimal influence on the decision-making process or are to be minimally impacted by the project and are thus low in the project proponent's engagement list.

5.2.1.1 Approach & Methodology for Stakeholder Mapping and Analysis

The approach adopted for mapping and analysing involves mapping of the key stakeholders (directly and indirectly) and assessing their significance, influence and impact on the project. The methodology adopted is described below:

The significance of a stakeholder group is categorize considering the magnitude of impact (type, extent, duration, scale, frequency) or degree of influence (power, proximity) of a stakeholder group and urgency/likelihood of the impact/influence associated with the particular stakeholder group in the project context. The magnitude of stakeholder impact/influence is assessed taking the power/responsibility of the stakeholder group and is categorized as negligible, small, medium and large. The urgency or likelihood of the impact on/influence by the stakeholder is assessed in a scale of low, medium and high. The overall significance of the stakeholder group is assessed as per the matrix provided in **Table 5.2** below:

		Sensitivity /Vulnerability / Important Resource / Receptor		
		Low	Medium	High
ω	Negligible	Negligible	Negligible	Negligible
act	Small	Negligible	Minor	Moderate
Jnit Imp	Medium	Minor	Moderate	Urgent
Maç of	Large	Moderate	Urgent	Urgent

The following section provides brief profiles of the various stakeholders in the project as discussed in the previous sub section along with their degree of influence. The details are provided in **Table 5.3** below.

Stakeholder	Stakeholder Group	Magnitude of Impact/ Influence	Stakeholder
Category			Significance
		Primary Stakeholder	
Community	Project Affected	Impact of Project on Stakeholder: Large	Urgent
	Families and People	Influence of Stakeholder on Project: Medium	
	Vulnerable Groups	Impact of Project on Stakeholder: Large	Urgent
	including women,	Influence of Stakeholder on Project: Low	
	elderly		
Government	Regulatory Authorities	Impact of Project on Stakeholder: Small	Moderate
Bodies		Influence of Stakeholder on Project: High	
Other Groups	EPC contractors and	Impact of Project on Stakeholder: Medium	Urgent

Table 5.3 Stakeholder Mapping and Analysis

The stakeholder engagement plan prepared for the project, as part of the RAP provides an understanding of the engagement activities undertaken thus far and the key feedback received from the same.

5.3 Summary of Engagement Activities

CUET has undertaken various engagement activities with the key stakeholder groups identified. This section provides a summary of the key engagement activities undertaken as part of the following project stages:

- Project Land Take process
- Rapid Social Screening for the project
- Engagement as part of the SIA and RAP process
- Ongoing Engagement as part of the larger resettlement process

The following subsections provide a summary of the engagement activities.

5.3.1 Engagement as part of the Land procurement process

The land procurement process involved iterative rounds of consultations and negotiations with the landowners on their willingness to sell the land, an option to consider land swap and the land price. These negotiations were undertaken in phases, as discussed in Table 2.3, starting June/July 2014. The process of engagement with the landowners for the tower footprint and RoW was undertaken in 2019. Once the engagement was completed, consent letters were signed with the landowners.

According to the information available, it is understood that as part of the negotiation process, the landowners were provided an overview of the proposed project and change in land use that would occur from the same. The engagement activities were primarily led by the local land aggregators and RREL representatives. From the side of the landowners, most of the negotiations are understood to have been carried out through their land managers. The land take process was undertaken through a willing buyer willing seller arrangement, with the involvement of the government departments restricted to the identification of the landowners in keeping with the land records and processing of the Baina agreement and sale agreements.

It is understood that the engagement at this stage of the project was primarily restricted to the negotiations with the landowners. While the land users and rent collectors were aware of a potential land transaction and project proposed, the details of the same were not available with them. 20 ECB did not undertake any specific engagement activities with the land users and rent collectors during this phase.

Some of the key engagement activities undertaken as part of the land procurement process is presented in Table 6.4 below.

Date	Settlement	Purpose of Meeting
21/10/2019	Baish Pukur	Introduction of New Resettlement Manager
23/10/2019	Baish Pukur	Getting community's perception on the project, their future concerns and scope related to the project
		Concerns of the community regarding issues such as heat generation, uncertainty surrounding resettlement and livelihood
26/10/2019	Baish Pukur	 Discussion on the need for a resettlement committee Concerns regarding the resettlement issues
		Grievance Redressal mechanism

Table 6.4 Summary of Engagement Activities

Date	Settlement	Purpose of Meeting
06/11/ 2019	Baish	Establishing the resettlement committee
Pukur	Pukur	Discussion on the following aspects
		Function of the committee
		Placement of suggestion boxes
		Preparatory works to be undertaken by CUET
		Issues surrounding construction of new structures post land purchase
		Presence of youth clubs in the area
		The ongoing Resettlement Planning

5.3.2 Appointment of a Resettlement Manager

CUET appointed a resettlement manager for the site in September 2019. The role of the resettlement manager is to undertake focused engagement activities with the local community and impacted land users, develop relations with the same, oversee, and facilitate the implementation of the Resettlement process. From the information available, it is understood that this resettlement manager has undertaken multiple rounds of meetings and discussions with the stakeholders involved and the same have been documented in the form of minutes of meetings. The resettlement manager originally appointed was replaced in October 2019. The present resettlement manager is undertaking meetings and discussions with each individual household in the project footprint area in order to develop a more direct relationship with these stakeholders.

5.3.3 Establishing a Resettlement Committee

As part of the ongoing resettlement planning, CUET established a Teknaf Resettlement Committee (RRC). The RRC is led by the local community under ECB's facilitation and/or overall participation and it comprises of the following members:

- CUET's representatives (including its local partner);
- Representatives from the Union Parishads;
- Representatives of project affected villages within the new pucca road; and
- Any other key informants and any community-based associations or organizations that may be recommended by project affected villages.

The Committee was formed at the Project site on October 26, 2019 in the presence of the known Project Affected Households (PAHs). The NRC will consist of a general committee that will include representatives of all PAHs (one member selected from each households). A subcommittee of five PAHs representatives will be formed as the Execution Committee and a subcommittee that will comprise of six members where 3 of them are Local representatives (UP Chairman, ruling party members and businessman) and 3 from the PAHs will be formed as the Advisory Committee.

The five-member Execution Committee will have members that are nominated by the PAHs and will be responsible for overall coordination, communication, management and organization of all the activities associated to the resettlement. The six Advisory Committee members and the Committee will act as mediators if and when the general and executive committees will not be able to find amicable solutions.

Going forward CUET aims to broaden the RRC to ensure overall representation with regards to the aspects of gender, vulnerable groups, type of impacted entities. The RRC has already been asked to propose women candidates for inclusion in the committee. According to information from the executive committee members, there are two vulnerable households (a widow and an elderly headed households) who are connected with the other PAHs represented in the committee. The Resettlement Manager will finalize the strategy of representation after completion of his introductory household level consultations.

The RRC will thereafter be convened weekly (sometimes it may even without CUET's representatives) to discuss resettlement and livelihood restoration options and ongoing land access challenges and solutions. Each RRC meeting will be documented formally through minutes, signatures and photographs and a summary may also be printed and posted at every village. The records of meetings and next action points of RRC meetings will be maintained by the Resettlement Manager.

6. IMPACT ASSESSMENT AND MITIGATION MEASURES

6.1 Introduction

This section assesses the manner in which the project will interact with elements of the physical, ecological, social, cultural or human environment to produce impacts to resources/receptors. This has been organized as per the various stages of the project lifecycle to understand the risks and impacts associated with each of these individual stages.

The environmental and social impacts due to the project activities are considered in the two distinct stages of the project life cycle: (a) construction of the road (Construction Phase); and (b) operation and maintenance of the road (Operation Phase).

Impacts are identified and predicted based on the analysis of the information collected from the following:

- Project information (as outlined in Section Section 1;
- Baseline information (as outlined in Section Section 4.).

The identification of likely impacts during construction and operation phases has been carried out based on likely activities having their impact on socio-economic parameters, which are presented in *Section 4*. The details of the activities and their impacts have been worked out in the following sections.

6.2 Impact Assessment Methodology and Approach

Impact identification and assessment starts with scoping and continues through the remainder of the impact assessment process (IAP). The principal impact assessment (IA) steps are summarized in *Section*

6.2.1 Prediction of Impacts

Prediction of impacts is essentially an objective exercise to O.Creeds in what could potentially happen to the environment as a consequence of the project and its associated activities. This is essentially a repeat of the process undertaken in scoping, whereby the potential interactions between the project and the baseline environment are identified. From these potential interactions, the potential impacts to the various resources/receptors are identified, and are elaborated to the extent possible. The diverse range of potential impacts considered in the IA process typically results in a wide range of prediction methods being used including quantitative, semi-quantitative and qualitative techniques. The nature and types of impacts that has been addressed in this SIA is defined in the *Box 6.1* below.

Box 6.1 Nature and types impacts considered for impact assessment

- Negative, when impact is considered to represent adverse change from the baseline or to have introduced a new undesirable factor; and
- Positive or beneficial, when impact is considered to represent improvement to baseline or to have introduced a new desirable factor.
- Direct, impacts that result from a direct interaction between the project and a resource/ receptor
- Indirect, impacts that follow on from the direct interactions between the project and its environment as a result of subsequent interactions within the environment; and
- Induced, impacts that result from other activities (which are not part of the project) that happen as a consequence of the project

6.2.2 Evaluation of impacts

In assessing the significance of impact, the following impact characteristics are taken into consideration.

6.2.2.1 Determining magnitude of an impact

Magnitude, i.e. severity of an impact or degree of change caused by a project activity is a function of one or more of the following characteristics:

- Scale: Degree of damage that may be caused to the environmental components concerned.
- *Extent*: The extent refers to spatial or geographical extent of impact due to proposed project and related activities.
- *Duration*: The temporal scale of the impact in O. Creeds's of how long it is expected to last.

Criteria have been defined for each of these key elements and classified based on the level of impacts (low, medium and high) on the environmental component, presented in *Table 6.1* below:

Impact Elements	Criteria	Ranking
Scale	Irreversible damage to natural environment and/or difficult or may not to revert back to earlier stage with mitigation; Major changes in comparison to baseline conditions and / or likely to regularly or continually exceed the standard;	High
	Reversible damage to natural environment but likely to easily revert back to earlier stage with mitigation; Perceptible change from baseline conditions but well within acceptable norms.	Medium
	Effect is within the normal range of natural variation; No perceptible or readily measurable change from baseline conditions;	Low
Extent	Study area and beyond study area	National
	Project site & study area (5.0 km from CUET site)	Regional
	Project site & its immediate vicinity (0.5 km from CUET site)	Local
Duration	Spread beyond the lifecycle of the project	Long
	Spread across several phases of the project lifecycle	Medium
	Only during particular activities or phase of the project lifecycle	Short

Table 6.1 Magnitude Prediction Criteria

Definitions of magnitude for physical, biological and human environmental resources or receptors are defined subsequently:

Magnitude Definitions	Biophysical and Environmental Receptors	Socio-economic, Cultural and Community Health Receptors	
Negligible	Immeasurable, undetectable or within the range of normal natural variation	Change remains within the range commonly experienced within the household or community.	
Small	Slight changes in background levels well within accepted norms. Emissions/ Discharges are well within benchmark discharge limits. The effected environmental conditions are expected to be recovered within a few months	Perceptible difference from baseline conditions. Tendency is that impact is local, rare and affects a small proportion of households and is of a short duration.	
Medium	Temporary or localised change in physical or biological environment. The recovery of such changes returning to background levels thereafter and / or Occasional exceedance of benchmark emission/ discharge limits	Clearly evident difference from baseline conditions. Tendency is that impact affects a substantial area or number of people and/or is of medium duration. Frequency may be occasional and impact may be regional in scale.	
Large	Change over a large area or ecological conditions that lasts over the course of several months with quality likely to cause secondary impacts; and / or routine exceedance of benchmark emission/ effluent discharge limits	Change dominates over baseline conditions. Affects the majority of the area or population in the Area of Influence and/or persists over many years. The impact may be experienced over a regional or national area.	
Positive	In the case of positive impacts, no magnitude is assigned, unless there is ample data to support a more robust characterization. It is usually sufficient to indicate that the Project will result in a positive impact, without characterizing the exact degree of positive change likely to occur.		

Table 6.2 Magnitude Definitions for Physical, Biological & Human Resources/Receptors

Note: In the case of impacts resulting from unplanned events, the same resource/ receptor-specific approach to concluding a magnitude designation was followed, but the 'likelihood' factor was considered, together with the other impact characteristics, when assigning a magnitude designation.

6.2.2.2 Determining Sensitivity/ Importance/ Vulnerability of Receptor

In addition to characterising the magnitude of impact, the other principal step necessary to assign significance for an impact is to define the sensitivity/ vulnerability/ importance of the impacted resources/ receptor. There are a range of factors to be taken into account when defining the sensitivity/ vulnerability/ importance of the resource/ receptor, which may be phisical, biological, cultural or human as per the following understanding:

Where the resource is physical (for example, fresh water body) its quality, sensitivity to change and importance (on a local, regional, national importance) are considered.

- Where the resources/ receptor is biological or cultural (for example, wildlife habitat), its importance (for example local, regional or national importance) and its sensitivity to the specific type of impact are considered.
- Where the receptor is human, the vulnerability of the individual, community or wider societal group is considered.

Definition as defined in *Table 6.3* has been adopted to O.Creeds define sensitivity/ importance/ vulnerability of environmental resources or receptor.

Sensitivity Criteria	Contributing Criteria
High	Existing physical environment quality is already under stress; Ecologically sensitive/ protected area, provides habitat for globally protected species; Profound or multiple levels of vulnerability that under O.Creeds ability to adapt to changes brought by the project. Human receptors/ vulnerable community are located within the project footprint and directly affected by the project
Medium	Existing physical environment quality shows some sign of stress; which is sensitive to change in quality or physical disturbance; Natural habitat provides habitat for wildlife, which are protected under National regulations; Some, but few areas of vulnerability; still retaining an ability to at least in part adapt to change brought by the project. Human receptors/ vulnerable community are located adjacent the project site and likely to be affected by the project
Low	Existing physical environment quality is good; Modified habitat provides habitat for common species; Human receptors are located away and are not likely to be affected due to the project related activities

Table 6.3 Sensitivity/Importance/ Vulnerability Criteria

Determining sensitivity/importance/ vulnerability of environmental resource or receptor are defined as follows:

Table 6.4 Definitions of Sensitivity/Importance /Vulnerability Biophysical andHuman

Sensitivity	Biophysical and Environmental Receptors	Socio-economic, Cultural and Community Health Receptors
Low	Existing physical environment quality is good and the ecological resources that it supports are not sensitive to disturbance	Minimal vulnerability; consequently with a high ability to adapt to changes brought by the Project and opportunities associated with it.
Medium	Existing physical environment quality shows some signs of stress and/ or supports ecological resources that could be sensitive to change in quality or physical disturbance.	Some, but few areas of vulnerability; still retaining an ability to at least in part adapt to change brought by the Project and opportunities associated with it.
High	Physical environment quality is already under stress and/ or the ecological resources it supports are very sensitive to change	Profound or multiple levels of vulnerability that undO.Creeds ine the ability to adapt to changes brought by the Project and opportunities associated with it.

Evaluating Significance of Impacts

Once magnitude of impact and sensitivity/ vulnerability/ importance of resource/ receptor have been characterized, the significance was assigned for each impact. Impact significance is designated using the matrix shown in *Figure 6.1*.

		Sensitivity/Vulnerability/ Important Resource/Receptor		
		Low	Medium	High
de	Small	Negligible	Minor	Moderate
gnitu Impa	Medium	Minor	Moderate	Major
Ma of	Large	Moderate	Major	Major

Figure 6.1 Assessing Significance of Impact due to Proposed Project

The matrix applies universally to all resources/receptors, and all impacts to these resources/receptors, as the resource/receptor-specific considerations are factored into the assignment of magnitude and sensitivity/vulnerability/ importance designations that enter into the matrix. *Table 6.5* provides a context for what the various impact significance ratings signify.
Table 6.5 Categorization of Impact Significance

Impact	Descripti	on of Impact Significance	
Category	Biophysical and Environmental Receptors	Social and Cultural Receptors	Community Health
Positive	Positive impacts provide resources or receptors, most oft considered in assessing the overall positive nature of sor improvement in infrastructure and overall development of	en people, with positive benefits ne impacts such as economic be region	S. The concepts of equity have been enefits, or opportunities for employment,
Negligible	An impact of negligible significance is one where a resource/ receptor (including people) will essentially not be affected in any way by a particular activity or the predicted effect is deemed to be 'imperceptible' or is indistinguishable from natural background variations	Inconvenience caused, but with no consequences to livelihoods, culture or quality of life.	Receptors may experience annoyance, minor irritation, or stress associated with change; minimal impact to perceived quality of life. Does not require treatment. No long-term consequences for the health of individuals and the community.
Minor	An impact of minor significance is one where a resource/ receptor will experience a noticeable effect, but the impact magnitude is sufficiently small and/or the resource/receptor is of low sensitivity/ vulnerability/ importance. In either case, the magnitude should be well within applicable standards/ guidelines	Impacts are short term and temporary and do not result in long term reductions in livelihood or quality of life.	Temporary reduction to health status of certain individuals that can be easily treated and does not result in long term consequences for community health. Impacts may lead to greater health inequalities in Project area.
Moderate	An impact of moderate significance has an impact magnitude that is within applicable standards/guidelines, but falls somewhere in the range from a threshold below which the impact is minor, up to a level that might be just short of breaching a legal limit. The emphasis for moderate impacts is on demonstrating that the impact has been reduced to a level that is as low as reasonably practicable (ALARP).	Adverse impacts that notably affect livelihood or quality of life at household and community level. Impacts can mainly be reversed but some households may suffer long-term effects.	High risk of diseases or injuries as well as exposure to Project operational risks to the local community. May result in long term but reversible community health impacts.
Major	An impact of major significance is one where an accepted limit or standard may be exceeded, or large magnitude impacts occur to highly valued/sensitive	Diverse primary and secondary impacts that will be impossible to reverse or	Loss of life, severe injuries or chronic illness requiring hospitalization. Exposure to and incidence of diseases not

Impact Category	Descript	ion of Impact Significance			
Category	Biophysical and Environmental Receptors	Social and Cultural Receptors	Community Health		
	resource/receptors. An aim of Impact assessment is to get to a position where the Project does not have any major residual impacts, certainly not ones that would endure into the long or extend over a large area. However, for some aspects there may be major residual impacts after all practicable mitigation options have been exhausted (i.e. ALARP has been applied).	compensate for, possibly leading to long impoverishment, or societal breakdown.	commonly seen previously in the area. Likely to have long- consequences for community health.		

6.2.2.3 Residual Impact Evaluation

Once mitigation and enhancement measures are declared, the next step in the IA Process is to assign residual impact significance. This is essentially a repeat of the impact assessment steps discussed above, considering the assumed implementation of the additional declared mitigation and enhancement measures.

6.2.3 Identification of mitigation and enhancement measures

Once the significance of an impact has been characterized, the next step is to evaluate what mitigation and enhancement measures are warranted. For the purposes of this IA, study team has adopted the following Mitigation Hierarchy:

- Avoid at Source; Reduce at Source: avoiding or reducing at source through the design of the project.
- 4 Abate on Site: add something to the design to abate the impact.
- Abate at Receptor: if an impact cannot be abated on-site then control measures can be implemented off-site.
- Repair or Remedy: some impacts involve unavoidable damage to a resource and these impacts can be addressed through repair, restoration or reinstatement measures.
- Compensate in Kind, compensate through other means: where other mitigation approaches are not possible or fully effective, then compensation for loss, damage and disturbance might be appropriate.

The priority in mitigation is to first apply mitigation measures to the source of the impact (i.e., to avoid or reduce the magnitude of the impact from the associated Project activity), and then to address the resultant effect to the resource/receptor via abatement or compensatory measures or offsets (i.e., to reduce the significance of the effect once all reasonably practicable mitigations have been applied to reduce the impact magnitude).

6.2.4 Management and monitoring

The final stage in the IA Process is definition of the management and monitoring measures that are needed to identify whether:

- a) impacts or their associated project components remain in conformance with applicable standards; and
- b) Mitigation measures are effectively addressing impacts and compensatory measures and offsets are reducing effects to the extent predicted.

An Management Plan(MP), which is a summary of all actions which the Project Proponent has committed to executing with respect to social/health performance for the project, is also included as part of the SIA report. The Management Plan includes mitigation measures, compensatory measures and offsets and management and monitoring activities.

6.3 Environmental and Social Impacts:

6.3.1 Impact on Land Use

For the assessment of land use change, the sensitivity and magnitude criteria outlined in *Table 6.1* and *Table 6.3* respectively has been used.

6.3.1.1 Additional Mitigation Measures

- In keeping with this assessment, the project has commissioned the development of a Resettlement Action Plan (RAP) and associated Resettlement Policy Framework (RPF). This RAP will provide a detailed assessment of the impacts of physical and economic displacement and identify suitable mitigation measures/entitlements for the same.
- In addition to the alternative housing and agricultural land, the project will provide allowances in term s of transition allowances, shifting allowances, food security allowances flood
- security allowance etc. as part of the RAP entitlements
- For those PAHs who elect to the option of self-relocation, provide compensation for the impacted immovable assets at replacement cost, without deducting the depreciation value, as provided in the RAP;
- The project will also provide additional livelihood restoration measures to mitigate the impacts due to reduction in land holdings through the Livelihood Restoration Plan for the project;
- **4** Grant preference to the PAHs for direct/indirect project employment opportunities
- Identify and provide additional social and livelihood support to especially vulnerable families.
- The SEP and GRM for the project will be applicable to the land owners and users impacted

6.3.1.2 Residual Impact Significance

The residual impact significance will remain major as changes in land use will be for long term for majority of the project component (installation of cable car stations, access roads, central monitoring station etc.)

Impact	Cł	nange	s in Land	us	e during	l co	nstr	uction	l
Impact Nature	Negative		Positive				Neutral		
Impact Type	Direct	Indirect				Induced

Residual Impact	Negligible	N	linor		Moderate			Major	•
Significance	Significance of impact is considered major								

Table 6.6 Categorization of Residual Impact

6.3.2 Impact on Natural Resources

6.3.2.1 Source of Impact

The project's land take will result in the loss of access to natural resources, such as water bodies associated with homestead area, timber trees, fodder and other non-timber trees, and common resources such as River and Stream

As part of the resettlement site, the RPF and the LRP is considering the existing settlement profile in O. Creeds's of enabling access to alternative resources at the resettlement site. Based on the information to be obtained from the Land and Asset Inventory survey, the resettlement site will consider the option of minimum loss to natural resources, and/or partial access to current resource locations.

6.3.2.2 Embedded/In-built Controls

As part of the resettlement site, the project proposes to consider all options at the resettlement site, including continued access to the current resources, partially, and proportionate replacement of few resources, which can be reproduced at the site.

6.3.2.3 Significance of Impact

The impact from the project to the natural resources will be is of the change in the land use of the area from agricultural to non-agricultural land use. Due to the nature of the project, the project development will require the clearing of the existing trees in the area and the filling of the existing water bodies. The project will also result in a change in the drainage patterns in the area; due to the creation of flood protection measures and limiting the water flow within the project area.

Many houses inside the project footprint have tress such as fruit trees like Mango, jackfruit, timber trees like Banana and Coconut are mainly used for consumption, as firewood and for house construction. Discussion with the affected community reported that each household has a backyard with a minimum a three to four trees, which is sufficient for family consumption. As per consultation on an average, every household inside the project footprint owned a minimum of 20-30 bamboo trees and is majorly used for making the cattle shed, bamboo baskets like "Kabu", paddy storage called "Dali", for making birds houses and fish traps etc. It has also been observed that bamboo is also used to make decorative house roofs. This skill set of using bamboo is traditional. However, the skill is not passed down to women. This type of skill set is restricted to men.

Dependence on River resources along the study area is mainly for fishing along the Naf River and extraction of sand mining. Fishing along the River is carried out during post winter and pre summer i.e falgun, *Chaitra* (Feb and March) summer season i.e *Boishakh* (April) season. These reported to be the good season for fishing. No fishing carried out during Monsoon season. Fishing carried out two times in a day from 10 PM to 7 AM and from 10 AM to 1 PM. The travel 3 -5 km from the shoreline towards the Naf River for fishing. Fishing along the Naf is mainly for income source.

Fishing by community in the project site are mainly done in small-scale in the pukur near to their households.

According to the households surveyed, the sand collected from Naf River is used in construction of houses. Consultation with the local community in Naturapara, Dolmundi, reported that the community extracts sand from the nearby River bodies mainly for house construction.

The sensitivity of the receptor is assessed as major. Thus, the overall significance of impact is assessed as Major.

6.3.2.4 Additional Mitigation Measures

The following additional mitigation measures have been identified for the project:

- The RAP will provide additional entitlements in term s of support during the transition phase to supplement the loss of access to natural resources for the first 1-2 years, while the new resources are generated and become productive.
- The project will also allow the land users and owners to harvest the standing crops and trees in the project land
- The crops, trees and pukurs and other natural resources impacted will be compensated at replacement value

6.3.2.5 Residual Impact Significance

The residual impact significance will remain major.

Impact		Impact on Natural resources									
Impact Nature	Negative			Positive	Э			Neutral			
Impact Type	Direct			Indirect			Induced				
Impact Duration	Temporary Sho			rt-term	rt-term Long-term				Permanent

Significance	Significance o	Significance of impact is considered Major									

6.3.3 Occupational Health & Safety Related Impacts

6.3.3.1 Source of Impact:

Occupational health and safety impacts during construction phase are anticipated primarily from operation of construction machineries/ equipment during site preparation and operation of labour camps for housing of onsite workers. Source of impacts during operation phase may happen from working in areas with high voltage,

6.3.3.2 Embedded Control Measures:

The project embedded control measures are as follows:

- Provision of drinking water facility, sanitation and cooking facilities;
- Provision of proper PPEs for the contractor workers onsite

6.3.3.3 Assessment of Impact:

Impact on occupational health and safety of construction workers is anticipated from exposure to high noise generated from operation of heavy machineries /equipment and fugitive dust

generated from construction activity. It is estimated that approximately 700 workers will be deployed by the contractor. Continuous exposure of workers to high noise levels and fugitive dust may lead to adverse health impacts viz. headache, asthma, allergy, hearing loss etc. However, considering the temporary nature of the construction phase activities, operation of machineries/equipment and provision of proper PPEs for the workers, it may not cause any significant impact.

The outstation project workforce will be housed in labour camp located in the site. It is proposed to provide the adequate facilities in the labour camp like housing facility with proper ventilation, electricity, separate kitchen, solid waste collection facility, drinking water facility, sanitation facility, etc. Inadequate facilities and unhygienic condition may have impact on occupational health of the labourers.

The impact on occupation health and safety due to above mentioned construction activities is assessed to be minor

6.3.3.4 Additional Mitigation Measures:

The mitigation measures are as follows:

- Adequate provision of healthy living conditions will be ensured in the contractor labour camp;
- Exposure of workers operating near high noise generating sources will be reduced to the extent possible;
- Use of adequate personal protection equipment (PPEs);
- Health surveillance of contractor workforce will be conducted
- Occupational health and safety of contractor workforce will be assured through the formulation of an "Occupational Health & Safety Management Plan.

6.3.3.5 Residual Impact:

Considering the implementation of above mentioned mitigation measures, impact on occupational health and safety is still assessed to be minor.

Impact		Impact on occupational health & safety								1	
Impact Nature	Negative			Positive				Neu	Neutral		
Impact Type	Direct			Indirect			Indu	Induced			
Impact Duration	Short Term			Medium Term			Long	Long Term			
Impact Extent	Local			Regio	onal			Natio	onal

Residual Impact Magnitude	Positive	Negligik		ole	Smal	I	l Me			Large	
Residual Impact	Negligible		Min	nor Modera			derate	rate Major			
Significance	Minor										

6.3.4 Community Health & Safety Impacts

6.3.4.1 Source of Impact:

The community health and safety may arise due to changes in environmental quality, health and safety impacts due to stringing of transmission lines, increased prevalence of disease and increase in traffic movement.

6.3.4.2 Embedded Controls:

The following control measures have been proposed:

- Proper collection, storage and disposal of MSW;
- Movement of heavy vehicles on approach road only during night time.

6.3.4.3 Assessment of Impact:

Dust and Noise Discomfort: Inhabitants residing close to access roads will be affected due to noise and dust generated from vehicular movement during construction phase. However, the access road is a curved road and the dust generation will be minimum.

Transmission of infectious diseases: Approximate 700 workers will be employed in the construction phase. Improper sanitation facility and disposal of municipal soil waste from the construction labour camp can cause vector borne diseases and other infectious diseases.

Traffic movement in site approach road: The construction activities are expected to increase traffic load in the site approach road which may create public safety issues for local residents and school children of nearby primary school. Potential impacts include pedestrian safety issues and safety aspects of slow moving vehicles. Considering project embedded control measures, the impact on community health & safety is assessed to be moderate.

6.3.4.4 Additional Mitigation measures:

The possible mitigation measures to address the aforesaid impacts include:

Dust control measures will be taken along site approach road;

- Domestic waste generated from construction site will be disposed in the solid waste dumping site;
- Spread of communicable diseases from influx of contractor workforce will be mitigated;
- Speed of heavy vehicles will be limited (<20 km /hr) near at the site access road
- Prepare a traffic management plan for the project

It is understood that CUET's transmission line design contractor had identified these structures prior to the route finalization. The design contractor ascertained that these structures are low and that the transmission line design and clearance considerations (submitted to PGCB) takes the heights of these structures into account:

The technical contractor has ascertained that no relocation of these structures will be required and CUET has confirmed that the easement procurement process for these structures is already complete.

Based on a review of the applicable regulations to construct transmission lines (i.e. Bangladesh Telegraph Act, 1885 and the Electricity Act, 1910), there is no specific provision for removal of structures. Both regulations provide a basis for compensation in case of damages.

Implications of Project Construction and Operations

During the construction of transmission lines and stringing activities, there is a possibility for localised damage to structures (and its occupants) that will need to be considered as a part of the construction management safeguards.

With respect to the operations phase, very few studies have been able to identify any health risks from transmission line electromagnetic forces. This is especially true for high voltage lines, such as the Nilphamari Project's 220 KV lines, because the transmission lines are typically much higher off the ground and the RoW is wider (18 m for the project). The World Health Organization (WHO) references the standards established by the International Commission on Non-Ionizing Radiation Protection (ICNIRP), an international scientific group, which are based on a careful examination of the research data on the health effects of exposure to EMF.

Other than the height considerations, CUET is yet to evaluate the EMF from the proposed transmission line in order to ascertain and compare with the ICNIRP standards within and at the edge of the RoW. Such a study is recommended to ascertain if the RoW is safe to work, access and/or live or if any specific development restrictions may be required (e.g. prohibition of construction of any houses and/or relocation of existing structures).

Recommendations

- It is recommended that CUET's transmission line design/technical consultants undertake an assessment to evaluate the implications of EMF by comparing the electric field within the RoW to ICNIRP standards. These standards are also prescribed by the WBG/IFC's EHS Guidelines for Power Transmission and Distribution;
- Should the above EMF study ascertain that the results are significantly less than the ICNIRP standards, CUET (in consultation with PGCB), may consider that the 12 structures remain and from a longer-term perspective. Specific community health and safety safeguards will be put in place at the time of construction and if required, the occupants of the structure will be provided with temporary housing arrangements;

- Should the above EMF study indicate an unacceptable risk based on a comparison of the ICNIRP standards, as the overall alignment has already been approved, CUET can explore the following two options:
 - Rerouting the alignment around these specific locations/clusters through design alternatives and providing easement compensation for other land owners identified; or
 - Applying the provisions of the proposed Entitlement Matrix and asking the structure owners to opt for resettlement housing and/or assisted self-relocation outside of the RoW. In addition, CUET will also need to impose development restrictions (e.g. prohibition on the construction of any houses or planting of trees above a certain height) on land within the RoW.

6.3.4.5 Residual Impact:

Considering the implementation of above mentioned mitigation measures, impact on community health and safety is assessed to be minor.

Impact		Impact on community health & safety								
Impact Nature	Negative		Posit	tive			Neutral			
Impact Type	Direct	Indire	Indirect			Induced				
Impact Duration	Short Term	Medium Term			Long Term					
Impact Extent	Local	Regio	Regional			Natio	nal

Residual Impact Magnitude	Positive	Negligi	ble	Small		Me	dium		Large	
Residual Impact	Negligible Mi		or Moderat		ate	te		ajor		
Significance	Minor									

6.3.5 In-migration of workers

Source of Impact

The peak man power requirement for the construction phase will require the project to recruit skilled, semi-skilled and unskilled workers from outside the project area/district.

6.3.5.1 Embedded Controls:

No embedded control measures in place

6.3.5.2 Impact Significance:

The in-migration of workers from outside the area will resulted and increased risk of conflict and social unrest due to cultural differences between the labourers and local community. Similarly, the in-migration may also lead to spread of communicable diseases due to contact and interaction among the labourers and the local community. Moreover, lack of proper sanitation or waste management facilities may also resulted in outbreak and transmission diseases. The in-migration will also have resulted in increased pressure on basic facility such as water etc. Such pressure and demand may lead to inflation and increased prices of food items and basic commodities. As this impact is restricted to the construction phase the impact, magnitude is assessed as **minor**.

Impact				Impa	ct on	In-mig	ratio	n		
Impact Nature	Negative			Positive				Neutral		
Impact Type	Direct			Indirect			Induced			
Impact Duration	Short Term			Medium Term			Long Term			
Impact Extent	Local			Regional			Natio	onal		
Impact Scale	Low			Medium				High		
Impact Magnitude	Positive Small		ll Medium		n	L		Large		
Resource/ Receptor Sensitivity	Low			Medium				High		
Impost Significance	Negligible		Minc	or Moderate				Major		
Impact Significance	Significance of	of ir	npac	t is co	nsider	ed min	or			
Residual Impact Magnitude	Positive	Negligik		ole	Smal		Me	dium		Large
Residual Impact	Negligible		Min	or Moderate			rate	Major		
Significance	Negligible									

6.3.5.3 Additional Mitigation measures:

- Adequate monitoring should be undertaken to ensure the contractor's compliance to the applicable rules and regulations and provisions of the contractual agreement for the remaining duration of construction.
- Health screening of migrant workers,
- ↓ Undertaking health awareness among the local community,
- Providing the local community of an understanding of the project activities and the possible health and safety risks associated with the same;
- Avoiding presence of unsanitary conditions and better facilities in the campsite, such as safe drinking water, proper waste collection and disposal system, etc.
- A labour influx management plan should be put in place to check migrant labours.

6.3.6 Employment Opportunities

6.3.6.1 Source of Impact

The project is expected to create direct and indirect employment opportunities during the construction and operation phase of the project.

6.3.6.2 Embedded/In-built Controls

No embedded measures identified

6.3.6.3 Significance of Impact

During the construction phase, the project is expected to create economic opportunities for the engagement of local unskilled and semi-skilled workers. The wage earnings from the project will supplement their earnings from agriculture or other sources. Further, O. Creeds, the project development may also result in the creation of indirect economic opportunities such as for small businesses, contractual workers, structures or vehicles being provided on rent etc. the influx of workers (Semi skilled and skilled) is also likely to raise the wage levels and result in a localized inflation of prices for basic goods and supplies. There may also be a temporary period where demand of consumable may exceed supply.

The overall significance of the impact is likely to be positive.

6.3.6.4 Enhancement Measures

The following additional enhancement measures have been identified for the project

- The project will prioritize the engagement (along with their contractors and subcontractors) of local workers and suppliers for the project construction phase, as long as the required skill set is available;
- As part of the engagement and disclosure activities, the project will provide prior information regarding upcoming opportunities in O. Creeds s of employment or supplying products to the local community to allow them to take maximum benefits from the same
- The project shall consider establishing a database of the skill set in the local community and making the same available for the contractors and subcontractors for the project.

6.3.6.5 Residual Impact Significance

The residual impact will remain positive.

Impact		Impact on employment opportunities									
Impact Nature	Negative			Positive				Neutral			
Impact Type	Direct			Indirect			Indu	Induced			
Impact Duration	Short Term			Medium Term			Long	Long Term			
Impact Extent	Local			Regio	onal				Natio	onal	
Impact Scale	Low			Mediu	Medium				High		
Impact Magnitude	Positive		Sma	ll Medium			Large				
Resource/ Receptor Sensitivity	Low			Medium				High			
Impost Significance	Negligible		Minc	or Moderate			e	Major			
Impact Significance	Significance c	of in	npac	t is co	nsider	ed	d posit	ive			
Residual Impact Magnitude	Positive	Negligit		ole	Smal	I		Me	dium		Large
Residual Impact Negligible		Min	inor		Moderate		Ma		ajor		
Significance		·									

6.3.7 Labour Welfare

6.3.7.1 Source of Impact

The projects will employ skilled, semi-skilled and unskilled workers, across the project lifecycle, which will include contractual and regular employees and local and migrant workers.

6.3.7.2 Embedded/In-built Controls

As an internal policy, CUET requires each contractor to comply with the applicable regulatory provisions and labour laws.

6.3.7.3 Significance of Impact

The regular skilled workers are likely to be comprised of migrant workers, from different districts and states in the country, depending upon the need for technical expertise. The peak project labour requirement is likely to be 700 workers. Presently the decision pertaining to whether the workers will reside in a labour camp or rented accommodations in the local villages has not been made.

The scale of the impact is medium, extent is regional and duration is short term. The overall magnitude of the impact is assessed as small and the sensitivity is assessed as medium. The overall significance is assessed as minor.

6.3.7.4 Additional Mitigation Measures

The following additional mitigation measures are suggested in order to ensure compliance with labor laws/provisions as per the industry best practices:

- The labor camp and accommodation facility for regular employees should be constructed to meet the requirements of the applicable reference framework (IFC and EBRD Worker's Accommodation: Processes and Standards), in O.Creeds s of space per worker, water and sanitation facilities, first aid, lighting and ventilation etc. and regular monitoring should be undertaken to ensure compliance through the project lifecycle;
- The labor camp should be located at a certain safe distance from the local community settlements, to minimize impacts on the local community due to the daily activities of the laborers
- CUET should ensure a monthly monitoring and regular auditing mechanism for monitoring the sub-contractors and suppliers with respect to compliance to the applicable reference framework, in O. Creeds s of resources, migrant workers, child labor and forced labor, health and safety, payment of wages etc.
- Strengthen security personnel around labor camps in order to maintain adequate law and order and avoid any possible tensions between the migrant workforce and host community.
- Each worker and employee shall be provided a health and safety training as part of the induction process
- Create a labour management plan that will contain provisions to ensure non-discrimination and fair treatment for all workers. The labour influx management plan will also dictate the requirement of workers at different stages of construction cycle, thereby helping in management of employment issues.
- Establish an internal grievance redressal mechanism in place, to allow for the employees and workers to report any concern or grievance related to work activities.

4

The residual impact significance will be reduced to negligible.

6.3.8 Impacts of Gender and Social Inclusion

6.3.8.1 Source of Impact

Project activities may result in disproportionate impacts on women and socially disadvantaged groups. These impacts are likely to result from the existing socio-cultural status of these groups, specifically in O. Creeds s of existing disparities in land and assets ownership, historical discrimination, literacy rates, livelihood profiles, access to and dependence on natural and other resources. These disparities make for impacts from the Project to be unequally borne by women and the socially disadvantaged groups.

6.3.8.2 Embedded/In-built Controls

A Gender Action Plan is being developed for the project that will provide specific provisions for women and other socially disadvantaged.

6.3.8.3 Significance of Impact

While the overall impacts from land procurement and use restrictions have been discussed, the land acquisition process could put some women at a greater disadvantaged or increase their risk of landlessness and poverty (due to loss of wages or livelihood opportunities); especially for female-headed households. Where the land ownership is in the name of the male Head of Household or a male family member, women members of the household are also dependent upon the land for their livelihoods and sustenance.

Some women may also be put at risk if the compensation amount and entitlements as part of the resettlement and rehabilitation process are appropriated only by the male members of the households, who may independently decide how to use the money. The risk of abandonment may also increase for some women. Where financial literacy is low, this access to cash may result in an increase in impulsive spending, substance abuse, gambling and prostitution. In turn, these may have increase the risk of gender based violence within the community.

In addition to the general occupational and community health and safety concerns, women workers and women living in settlements near Project sites, may be at greater risk of physical or sexual harassment (when compared to males). An increase in interaction between non-local workers and the local community, especially young girls and women, may increase their risk of harassment or even being trafficked. This risk is assessed as higher in cases where the workers are not accompanied by their families. Gender based violence risks may also increase following receipt of compensation payments, especially when combined with unequal decision-making and control over how payments are spent, as well as when payments are delayed, livelihoods related impacts are severe and unmitigated, and/or other financial or social stresses are increased.

Women are presently limited to agricultural and allied activities for their livelihoods. Therefore, local women are less likely to actively access employment opportunities for Project work. Frequently, local contractors will prefer male workers from the local communities, due to perceived notions of differential abilities to undertake work. Bangladesh also has a general acceptance of gender based differential wage rates for jobs. These aspects are likely to result in discriminatory practices by the Project in O. Creeds s of hiring of women (with the required skill set) and differences in wages paid for same quantity and nature of jobs, further disadvantaging women.

The scale of the impact is assessed as high, extent is local and duration is medium term. The overall magnitude of the impact is assessed as large and the sensitivity of the receptor is assessed as High. The overall significance of the impact is assessed as Major.

6.3.8.4 Additional Mitigation Measures

- The RAP; SEP-GRM, and ESMP for the project will provide specific provisions for the women and other socially disadvantaged groups identified
- As part of the local employment, the project shall explore possibilities of proactively engaging women in the project activities; especially civil works and housekeeping
- Prepare a worker code of conduct for the workforce to be engaged by the project
- The Grievance Redressal Committee (GRC), set up as a part of the Stakeholder Engagement Plan (SEP) of CUET will look into the gender grievance issues, arising due to construction activities or otherwise, and ensure systematic disposal of such cases, with due reporting.

6.3.8.5 Residual Impact Significance

The residual significance is assessed as moderate.

Impact	Im	Impact on Gender and Social Inclusion								
Impact Nature	Negative		Positive		Neu	Neutral

	Residual impact significance is moderate											

7. MANAGEMENT PLAN

This section presents the **Social Management Plan (SMP)** for the Project. The purpose of this MP is to specify the standards and controls required to manage and monitor environmental and social impacts during construction and operation phase. To achieve this, the MP identifies potential adverse impacts from the planned activities and outlines mitigation measures required to reduce the likely negative effects on the physical, natural and social environment.

7.1 CUET's Organizational Structure

To ensure the efficacy of Social management plan, certain institutional mechanism with welldefined roles and responsibilities is essential for effective implementation of identified mitigation measures both during construction and operation phases.

7.1.1 CUET's Management

CUET will have ultimate responsibility for implementing the provisions of the MP during construction and operation phase of the project. This role will include the on-going management of social impacts, monitoring of contractor performance as well as development of mechanisms for dealing with environmental and social problems.

CUET will also ensure that the activities of its contractors are conducted in accordance with good practice measures, implementation of which will be required through contractual documentation.

Source: CUET

7.2 Environment, Health and Safety Department (HSE)

The HSE department take the overall responsibility for co-ordination of the actions required for environment and social management and mitigation and for monitoring the progress of the proposed MP for the project. However, ultimate responsibility for implementing the provisions of the MP will lie with CUET.

In general, the HSE department shall perform the following activities:

- Preparation of required documents on environmental and social management;
- Ensuring availability of resources and appropriate institutional arrangements for implementation of MP;
- Implementation of the health and safety measures;
- Collection of the statistics of health of workers;
- Providing support during routine medical check-ups of workers;
- Awareness and implementing safety programs;
- Providing job specific induction training;
- Compliance of regulatory requirements;
- Carrying out environmental audits;
- Identify unsafe acts & conditions and suggest remedies;
- Develop safety culture and comply with company's HSE policy & standards requirements;
- Encourage and enforce the use of PPE's;
- Educate all employees for the use of PPE's & safe practices;
- Direct, coordinate and orient the safety activities;

- Promulgate the spread of policy, objectives, rules and/or regulations;
- Perform a thorough investigation of all accidents and review the recommendations to avoid any repetition;
- ✤ Monitoring the progress of implementation of ESMP; and
- **4** Reviewing and updating the ESMP as and when required for its effective implementation.

7.2.1 Inspection, Monitoring and Audit

Inspection and monitoring of the environmental impacts of the Project activities will increase the effectiveness of MP. Through the process of inspection and auditing, CUET will ensure that the conditions stipulated in various permits are complied. The inspection and audits will be done by the project identified HSE staff in coordination with O & M contractors and any other external agencies identified. The entire process of inspections and audits should be being documented. The inspection and audit findings are to be implemented by the site Incharge in their respective areas.

7.3 Reporting and Documentation

CUET will develop and implement a program of reporting through all stages of the project cycle. Delegated personnel shall require to fully complying with the reporting program in O. Creeds s of both timely submissions of reports as per acceptable level of detail. Reporting will be done in form of environmental check list, incident record register, environmental and social performance reports (weekly, monthly, quarterly, half yearly, yearly etc.).

7.3.1 Documentation

Documentation is an important step in implementing MP. CUET will establish a documentation and record keeping system to ensure recording and updating of documents per the requirements specified in ESMP. The documents should be kept as hardcopies as well as in electronic format. Responsibilities have to be assigned to relevant personnel for ensuring that the MP documentation system is maintained and that document control is ensured through access by and distribution to, identified personnel in form of the following:

- Master Environment Management System document;
- Legal Register;
- Operation control procedures;
- Work instructions;
- Incident reports;
- Emergency preparedness and response procedures;
- Training records;
- Monitoring reports;
- Auditing reports; and
- Complaints register and issues attended/closed.

7.3.2 Internal Reporting and Communication

Inspection and audits finding along with their improvement program are to be regularly reported to the senior management for their consideration. The same are also to be communicated within the staff working on the project.

To maintain an open communication between the staff and management on HSE and social issues the followings are being used:

- **4** Team Briefings,
- On-site work group meetings;
- Work Specific Instructions; and
- Meeting with stakeholders. Journey

7.3.3 External Reporting and Communication

HSE In-charge is the responsible person for ensuring that communication with regulatory agencies and stakeholders are maintained as per the requirement. All complaints and enquiries are to be appropriately dealt with and records be maintained in a Complaint/Enquiry Register by the delegated staff of HSE. All communications made to regulatory agencies should also be reported to CUET corporate HSE Head.

7.3.4 MP Review and Amendments

The MP act as an environment and social management tool which needs to be reviewed periodically to address changes in the organization, process or regulatory requirements.

Following a review, HSE In-charge will be responsible for making the amendments in the MP and seeking approval from the senior management. The amended MP will be communicated to all the staff.

7.4 Training Program and Capacity Building

Training is needed for effective implementation of MP. HSE In-charge of CUET as well as CUET Corporate HSE Head will ensure that Environmental health and safety induction training and job specific trainings are identified and given to the concerned personnel for construction activities and during operations of the solar farm.

Also general environmental awareness will be increased among the projects' teams to encourage the implementation of environmentally sound practices and compliance requirements of the project activities. This will help in minimizing adverse environmental impacts, compliance with the applicable regulations and standards, and achieving performance beyond compliance. The same level of awareness and commitment will be imparted to the contractors and sub-contractors involved in the project.

7.5 Social Management Plan

This section outlines the potential adverse impacts, mitigation measures, monitoring and management responsibilities during construction and operation phases of the Projects.

The purpose of Management Plan is to:

- Provide an institutional mechanism with well-defined roles and responsibilities for ensuring that measures identified in SIA are designed to mitigate potentially adverse impacts, are implemented;
- List all suggested mitigation measures and control technologies, safeguards identified through the SIA process;
- Assist in ensuring compliance with all relevant legislations at local, state and national level for the Projects.

In order to minimize adverse impacts during different phases of project lifecycles, mitigation measures, monitoring plan and responsibilities for its implementation are given in *Table 7.1*

Table 7.1 Social Management Plan

Project Activities	Impact/ Issue	Applicable Project Phase	Mitigation Measures	Responsibility for ensuring implementation of the suggested mitigation	MeansofVerificationthatmitigationhasbeen met	Timelines /frequency of Monitoring	Responsibility for implementation of monitoring	Supervision responsibility	Reporting Requirements
		-		Land use			-	-	
 Construction of site access road Construction of cable car and associate facility Construction residential unit 	Permanent changes in land use	Pre- Construction	 The land use in and around permanent project facilities should not be disturbed. Construction activities should be restricted to designated area. A RAP and LRP for the affected person will be prepared who will be considered for resettlement, compensation, and other restoration measures. 	CUET	Site inspection	Monthly monitoring	Site HSE Officer of BEZA Contractor	HSE In-charge of CUET	Report from HSE officer EPC Contractor to site HSE In-charge of CUET
				Land Procurement					
 Procurement of land for the project 	Physical and economic displacement of impacted households	Pre- construction	 Resettlement Policy Framework, Resettlement Action Plan and LRP. While the RPF will be a decision maker on the entitlement, the RAP to be developed will provide a detailed assessment of the impacts of physical and economic displacement and identify suitable mitigation measures/entitlements for the sameGrant preference to the PAHs for direct/indirect project employment opportunities Livelihood restoration for the affected person will be covered under the project. The plan will provide allowances in term s of transition allowances, shifting allowances flood security allowance etc. as part of the RAP entitlements For those PAHs who elect to the option of self-relocation, provide compensation for the impacted immovable assets at replacement cost, without 	CUET	 Resettlement Action Plan Stakeholder Engagement Plan Grievance Redressal Mechanism 	Prior to construction and in keeping with the RAP requirements	CUET resettlement manager	CUET HSE in- charge	As specified in the RAP, SEP and GRM document

Project Activities	Impact/ Issue	Applicable Project Phase	Mitigation Measures	Responsibility for ensuring implementation of the suggested mitigation	Means of Verification that mitigation has been met	Timelines /frequency of Monitoring	Responsibility for implementation of monitoring	Supervision responsibility	Reporting Requirements
			 deducting the depreciation value, as provided in the RAP Identify and provide additional social and livelihood support to especially vulnerable families 						
	Impact on Natural Resource Impacts	Pre- construction	 Preparation of a Resettlement Action Plan for the project Allow the land users and owners to harvest the standing crops and trees in the project land Compensate the crops, trees, pukurs and other natural resources 	CUET	Resettlement Action Plan	Prior to construction and in keeping with the RAP requirements	CUET resettlement manager	CUET HSE in- charge	As specified in the RAP document
			1	Cultural Resources	5				
Site Development	Loss of cultural resources including mosque and grave yards	Preconstruction	 Avoid impact on cultural sites to be extent possible Relocation of mosque and grave yards in consultation with the community 	CUET	Photographic evidence of relocation site Records of engagement activities and agreement with the community	Prior to construction	CUET resettlement manager	CUET HSE in- charge	Report of resettlement manager to HSE in-charge
				Labour Welfare					
Construction of sites and access roads	Impact on Labour Welfare and well being	Construction	 The labour camp shall be developed in keeping with the EBRD guidelines and IFC PS requirements The labor camp should be located at a certain safe distance from the local community settlements, to minimize impacts on the local community due to the laborers and the risks of conflict or violence between the workers and local community Each worker and employee shall be provided a health and safety training as part of the induction process The labour management plan shall have provisions to ensure non-discrimination and fair treatment for all workers CUET should ensure a monthly monitoring and regular auditing mechanism for monitoring the sub-contractors and suppliers 	BEZA Team, O&M Team	 Labour management plan Training records Monitoring of labour camp requirements against EBRD guidelines Visual Assessment by experts Internal grievance Redressal system 	Monthly monitoring	Site HSE Officer of EPC, site HSE In- charge of O&M Team	HSE In-charge of CUET	Report from HSE officer of EPC/O&M contractor to HSE officer of CUET

Project Activities	Impact/ Issue	Applicable Project Phase	Mitigation Measures	Responsibility for ensuring implementation of the suggested mitigation	MeansofVerificationthatmitigationhasbeen met	Timelines /frequency of Monitoring	Responsibility for implementation of monitoring	Supervision responsibility	Reporting Requirements
			 with respect to compliance to the applicable reference framework, in term s of resources, migrant workers, child labor and forced labor, health and safety, payment of wages etc. Strengthen security personnel around labor camps in order to maintain adequate law and order and avoid any possible tensions between the migrant workforce and host community. Establish an internal grievance redressal mechanism in place, to allow for the employees and workers to report any concern or grievance related to work activities 						
			Occu	pational Health and	Safety				
 Construction of sites and access roads Operation of the plant 	Impact on occupational health and safety of construction workers	Construction, Operation	 Develop an Occupational Health and Safety Management Plan Adequate provision of healthy living conditions will be ensured in the contractor labour camp; Exposure of workers operating near high noise generating sources will be reduced to the extent possible; Use of adequate personal protection equipment (PPEs); Health surveillance of contractor workforce will be conducted 	BEZA Team, O&M Team	 Occupational Health and Safety Management Plan Noise Monitoring Records Visual Observation of use of PPE Health surveillance records Monitoring of labour camp against EBRD guidelines 	Monthly monitoring	Site HSE Officer of EPC, site HSE In- charge of O&M Team	HSE In-charge of CUET	Report from HSE officer of EPC/O&M contractor to HSE officer of CUET
			Com	munity Health and	Safety				
Implication for structure along the RoW	Impact on local community's health and safety	Construction	Undertake an assessment to evaluate the implications of EMF by comparing the electric field within the RoW to ICNIRP standards. These standards are also prescribed by the	CUET and O&m Team	 Detailed Assessment report Resettlement Action Plan 	Prior to construction and in keeping with the RAP requirements	CUET resettlement manager	CUET HSE in- charge	As specified in the RAP, document

Project Activities	Impact/ Issue	Applicable Project Phase	Mitigation Measures	Responsibility for ensuring implementation of the suggested mitigation	Means of Verification that mitigation has been met	Timelines /frequency of Monitoring	Responsibility for implementation of monitoring	Supervision responsibility	Reporting Requirements
			 WBG/IFC's EHS Guidelines for Power Transmission and Distribution; Detailed assessment of the structures should be undertaken to ascertain use Should the above EMF study ascertain that the results are significantly less than the ICNIRP standards, CUET (in consultation with PGCB), may consider that the 12 structures remain and from a longer-term perspective. Specific community health and safety safeguards will be put in place at the time of construction and if required, the occupants of the structure will be provided with temporary housing arrangements; Rerouting the alignment around these specific locations/clusters through design alternatives and providing easement compensation for other land owners identified; Applying the provisions of the proposed Entitlement Matrix and asking the structure owners to opt for resettlement housing and/or assisted self-relocation outside of the RoW. impose development restrictions (e.g. prohibition on the construction of any houses or planting of trees above a certain height) on land within the RoW 		 Stakeholder Engagement Plan Grievance Redressal Mechanism 				
Construction of sites and access roads Movement of vehicles during operation	impact on local community's health and safety	Operation ,	 Dust control measures will be taken along site approach road; Domestic waste generated from construction site will be disposed in the solid waste dumping site; Spread/transmission of communicable diseases from influx of contractor workforce will be mitigated; 	BE∠A Team, O&M Team	 I raffic management plan Health surveillance of workers Visual observations 	Monthly monitoring	Site HSE Officer of BEZA, site HSE In- charge of O&M Team	HSE In-charge of CUET	Report from HSE officer of EPC/O&M contractor to HSE officer of CUET

Project Activities	Impact/ Issue	Applicable Project Phase	Mitigation Measures	Responsibility for ensuring implementation of the suggested mitigation	Means of Verification that mitigation has been met	Timelines /frequency of Monitoring	Responsibility for implementation of monitoring	Supervision responsibility	Reporting Requirements
			 Speed of heavy vehicles will be limited (<20 km /hr) near at the site access road; Prepare a traffic management plan for the project Construction activities to be undertaken only during day light hours – 6 am to 6 pm 						
In-Migration of Workers	Project Construction	Construction , Operation	 Adequate monitoring should be undertaken to ensure the contractor's compliance to the applicable rules and regulations and provisions of the contractual agreement for the remaining duration of construction health screening of migrant workers, Undertaking health awareness among the local community avoiding presence of unsanitary conditions and better facilities in the camp site, such as safe drinking water, proper waste collection and disposal system, etc. A labour influx management should be put in place to check migrant labours 	BEZA Team, O&M Team	 Health screening report In-flux management plan 	Monthly monitoring	Site HSE Officer of EPC, site HSE In- charge of O&M Team	HSE In-charge of CUET	Report from HSE officer of BEZA/O&M contractor to HSE officer of CUET
			E	mployment Opport	unities		•		
Project Construction	Creation of Employment Opportunities	Construction , Operation	 Prioritize the engagement of local workers and suppliers for the project construction phase, as long as the required skill set is available As part of the engagement and disclosure activities, the project will provide prior information regarding upcoming opportunities in term s of employment or supplying products to the local community to allow them to take maximum benefits from the same Consider establishing a database of the skill set in the local community and making the same 	BEZA Team, O&M Team	 records of workforce and the details of the local community engagement records of engagement activities database of skillset of the local community 	Monthly monitoring	Site HSE Officer of EPC, site HSE In- charge of O&M Team	HSE In-charge of CUET	Report from HSE officer of EPC/O&M contractor to HSE officer of CUET

Project Activities	Impact/ Issue	Applicable Project Phase	Mitigation Measures	Responsibility for ensuring implementation of the suggested mitigation	Means of Verification that mitigation has been met	Timelines /frequency of Monitoring	Responsibility for implementation of monitoring	Supervision responsibility	Reporting Requirements
			available for the contractors and subcontractors for the project.						
			Ger	nder and Social Incl	usion				
Project Construction	Impact on women and socially disadvantaged groups	Construction , Operation	 The RAP; SEP and GRM for the project will provide specific provisions for the women and other socially disadvantaged groups identified As part of the local employment, the project shall explore possibilities of proactively engaging women in the project activities; especially civil works and housekeeping Prepare a worker code of conduct for the workforce to be engaged by the project 	BEZA Team, O&M Team	 RAP, SEP and GRM records of workforce and the details of the local community engagement worker code of conduct 	Monthly monitoring	Site HSE Officer of BEZA, site HSE In- charge of O&M Team, CUET Resettlement Manager	HSE In-charge of CUET	Report from HSE officer of EPC/O&M contractor to HSE officer of CUET
				Livelihood Impacts	5				
Project operations	Loss of livelihood opportunities generated during construction phase	Operation	 Prepare a Retrenchment Plan for the project As part of the SEP, disclose information about the project operation phase and the impact on the community 	BEZA Team, O&M Team	 Retrenchment plan Disclosure records Grievance records 	Monthly monitoring	Site HSE Officer of EPC, site HSE In- charge of O&M Team and Resettlement manager	HSE In-charge of CUET	Report from HSE officer of EPC/O&M contractor to HSE officer of CUET

8. CONCLUSION

CUET is planning to construct a 9.5 km long cable car in Naf Tourism Park Coxs Bazar district, Teknaf Chittagong Division in North Eastern Bangladesh.

This SIA has been carried out, to evaluate the potential social impacts which could arise due to the implementation of the road construction. Assessments of the impacts have been presented with mitigation measures to reduce the magnitude of the impacts. Alternatives to the Project and key design aspects have also taken in cognizance, as part of this Study.

The project may create some impacts on land use, air quality, noise quality, physiography & drainage, local ecology, community health and safety during the construction phase. Limited disturbance is envisaged on the neighboring community in Hatiarguna Village. Mitigation measures have been suggested to minimize adverse environmental and social impacts that have been identified as part of the assessment.

Similarly, social impacts have been identified, and assessed, based on the baseline study undertaken as a part of SIA. The results of the same will frame the RPF and the RAP. The major impact identified is the change in the biodiversity of Naf River and at the top of the hill as the cable car will be connected among the three points. But the people within the project site will be economically benefited as it will be a tourist attraction.

An overarching Social Management Plan (SMP) has been developed to cover implementation mechanism for recommended mitigation measures to counter likely adverse environmental and social impacts arising due to the development of the road. In addition, there will be a Gender Action Plan (GAP) to address issues related to gender vulnerability during and post construction phase. A Labour Management Plan (LMP) for labour and employment during construction, and a SEP-GRM, which will be a live and dynamic document for the project, that will record, review and address all external grievances arising from the impacted households throughout the project cycle.

CUET will also ensure that the environmental and social performances of all the activities are monitored throughout execution of various Project components. CUET will continue to report E&S performance and submit monitoring reports regularly to statutory authorities as per National environmental norms.

8.1 Impact Assessment Summary

The table below presents the outcomes of the comprehensive assessment of identified impacts as a result of the various phases of the Project. Significance of impact has been presented here without mitigation (with embedded controls) and with mitigation.

Impact Description	Impact	Significance of	Impact
	nature	Before Mitigation	With Mitigation
Pre-Construction Phase		- -	-
Change in land use	Negative	Major	Moderate
Physical and Economic Displacement	Negative	Minor	Minor
Other Livelihood Impacts	Negative	Minor	Minor
Natural Resources	Negative	Major	Major
Construction Phase			
Road & Traffic	Negative	Moderate	Minor
Occupational Health and Safety	Negative	Minor	Negligible
Community Health and Safety	Negative	Minor	Minor
Employment Opportunities	Positive		
Labour Welfare	Negative	Minor	Negligible
Operation Phase			
Soil contamination due to waste generation, spillage and leakage	Negative	Major	Moderate
Occupational Health and Safety	Negative	Minor	Negligible
Impact on Local Employment	Positive		

Table 8.1 Impact Assessment Summary

The Social Management Plan (SMP) describes mitigation measures for impacts specific to the Project activities and also discusses implementation mechanisms.

8.2 Conclusion

It has been noted from **Table 9.1** that most of the impacts are of moderate significance and can be addressed by using suggested mitigation measures and other guidelines detailed in the RAP. The impacts identified to physical, ecological, and social environment are to be addressed through the mitigation measures discussed in *Section 7.* To conclude, implementation of ESMP, the RAP and RPF will help CUET to benchmark its management plans based on the national regulations as guidelines, as well as to meet the International Safeguard requirements.
